PREFACE

For a computer communication network to provide communication services with desirable characteristics to its users and to utilize its resources efficiently, many protocols are needed. Such protocols are implemented as collections of parallel programs. Like any large programming system, the development of the protocols of a large network will benefit from a structured approach. Technical issues in the design and construction of protocols for computer communication networks constitute the subject matter of this tutorial. Protocols for most categories of packet-switching networks (local area nets, wide area nets and internets) are considered. This book is, however, different from the two other IEEE Computer Society tutorials in the general area of networking (*Local Computer Networks* by Thurber and Freeman and *Computer Networks* by Abrams and Cotton). Our emphasis is on the technical problems encountered in the design and construction of protocols and on solutions to these problems. We strive to illustrate fundamental principles for understanding protocols. For example, we do not present the open systems interconnection (OSI) model as *the* architectural model. Instead, we discuss protocol structuring principles (in Chapter 1). The OSI model is then presented as one of many models that can be derived from an application of such principles.

This book is organized into seven chapters. Chapter 1 presents fundamentals of computer communication networks. Chapter 2 covers data link control protocols. Chapter 3 covers multiple access protocols. Chapter 4 discusses local area networks. Chapter 5 addresses resource allocation problems and solution techniques in store-and-forward networks with point-to-point links. Chapter 6 covers communication protocols for wide area networks and internetworks. Chapter 7 presents some models and methods for protocol verification and construction. Each chapter begins with several sections of original text, followed by a list of references and a set of reprinted articles.

We attempt to point out in the original text how the referenced articles and the reprinted articles in each chapter fit into some general framework and how different ideas and techniques relate to each other.

Most of the reprinted articles have been used in graduate courses on data communications and on network protocols that I have taught at the University of Texas at Austin over the past seven years. This book is intended to be a tutorial text and *not* a reprint collection of seminal articles and articles describing important developments for the first time. Although some of the reprinted articles are indeed seminal papers, many of the reprinted articles were chosen on the basis of their subject coverage, their depth of coverage, and writing style. For example, the Shoch-Dalal-Redell-Crane article on Ethernet is reprinted rather than the seminal paper by Metcalfe and Boggs. The reference lists also tend to be representative rather than bibliographical in nature. We believe that they provide an adequate starting set for newcomers to this field. But there is no doubt that we have left out numerous important articles in the literature.

This book should be appropriate as the text or a source of supplemental readings for a graduate-level course on computer communication networks. It should be valuable also as a reference for systems engineers and analysts who desire an understanding of the technical principles that underlie the design of communication network software and the performance tradeoffs involved in its design.

All of the original text and the majority of the reprinted articles can be read without any special background in mathematics. However, some experience with computer programming (in any high-level language) is helpful. Many of the reprinted articles in Chapters 3 and 7 and some in Chapter 5 do require a certain amount of back-

ground in calculus and basic probability theory. These articles are placed at the end of those chapters and can be skipped by the reader if so desired.

I wish to express my appreciation to the authors and publishers of the articles we have reprinted. I would also like to thank the Com-

puter Society Press editor, Professor Chuan-Lin Wu, and the reviewers for their valuable inputs.

The final packaging of this tutorial was done by Margaret Brown of the Computer Society Press. The original text was typed by K. F. Carbone of the University of Texas at Austin. Both of them should be congratulated for a job well done.

Simon S. Lam

Table of Contents

Preface.....	iii
Chapter 1: Fundamentals of Computer Communication Networks	1
<i>S.S. Lam</i>	
1.1: The Evolution of Packet Switching	43
<i>L.G. Roberts (Proceedings of the IEEE, November 1978, pages 1307-1313)</i>	
1.2: A Decade of Network Development.....	50
<i>L. Kleinrock (Journal of Telecommunication Networks, Spring 1982, pages 1-11)</i>	
1.3: Networks for the Nineties	61
<i>L.M. Branscomb (IEEE Communications Magazine, October 1983, pages 38-43)</i>	
Chapter 2: Data Link Control Protocols	67
<i>S.S. Lam</i>	
2.1: Data Link Control Procedures.....	70
<i>S.S. Lam (Computer Communications, Vol. 1, Principles, Chapter 3, W. Chou (Editor), 1983, pages 81-113)</i>	
2.2: Specification and Verification of an HDLC Protocol with ARM Connection Management and Full-Duplex Data Transfer	96
<i>A.U. Shankar and S.S. Lam (The Proceedings of the ACM SIGCOMM '83 Symposium, March 1983, pages 38-48)</i>	
Chapter 3: Multiple Access Protocols	107
<i>S.S. Lam</i>	
3.1: Multiple Access Protocols	117
<i>S.S. Lam (Computer Communications, Volume 1, Principles, Chapter 4, W. Chou (Editor), 1983, pages 114-155)</i>	
3.2: Local-Area Subnetworks: A Performance Comparison	149
<i>W. Bux (IEEE Transactions on Communications, October 1981, pages 1465-1473)</i>	
3.3: A Carrier Sense Multiple Access Protocol for Local Networks.....	158
<i>S.S. Lam (Computer Networks, Volume 4, 1980, pages 21-32)</i>	
3.4: Packet Switching in a Multiaccess Broadcast Channel: Performance Evaluation	170
<i>L. Kleinrock and S.S. Lam (IEEE Transactions on Communications, April 1975, pages 410-423)</i>	
3.5: Dynamic Control Schemes for a Packet Switched Multi-Access Broadcast Channel	184
<i>S.S. Lam and L. Kleinrock (National Computer Conference Proceedings, 1975, pages 143-153)</i>	
3.6: An Optimal Adaptive Scheme for Multiple Access Broadcast Communication	195
<i>L. Kleinrock and Y. Yemini (Conference Records of the International Conference on Communications, June 1978, pages 7.2.1-7.2.5)</i>	
3.7: Generalized TDMA: The Multi-Accessing Tree Protocol.....	200
<i>J.I. Capetanakis (IEEE Transactions on Communications, October 1979, pages 1476-1484)</i>	
Chapter 4: Local Area Networks	209
<i>S.S. Lam</i>	
4.1: Evolution of the Ethernet Local Computer Network.....	215
<i>J.F. Shoch, Y.K. Dalal, D.D. Redell, and R.C. Crane (Computer, August 1982, pages 10-26)</i>	

4.2: Why a Ring?	232
<i>J.H. Saltzer, D.D. Clark, and K.T. Pogran (Proceedings of the Seventh Data Communications Symposium, 1981, pages 211-217)</i>	
4.3: A Token-Ring Architecture for Local-Area Networks: An Update	239
<i>D.W. Andrews and G.D. Schultz (Proceedings of COMPCON F'82, 1982, pages 615-624)</i>	
Chapter 5: Resource Allocation in Store-and-Forward Networks with Point-to-Point Links	249
<i>S.S. Lam</i>	
5.1: The New Routing Algorithm for the ARPANET	253
<i>J.M. McQuillan, I. Richer, and E.C. Rosen (IEEE Transactions on Communications, May 1980, pages 711-719)</i>	
5.2: Explicit Path Routing in Communications Networks	262
<i>R.R. Jueneman and G.S. Kerr (Proceedings of the International Conference on Computer Communication, 1976, pages 340-342)</i>	
5.3: Routing Techniques Used in Computer Communication Networks	265
<i>M. Schwartz and T.E. Stern (IEEE Transactions on Communications, April 1980, pages 539-552)</i>	
5.4: Congestion Control of Packet Communication Networks by Input Buffer Limits—A Simulation Study	279
<i>S.S. Lam and Y.C.L. Lien (IEEE Transactions on Computers, October 1981, pages 733-742)</i>	
5.5: Flow Control: A Comparative Survey	289
<i>M. Gerla and L. Kleinrock (IEEE Transactions on Communications, April 1980, pages 553-574)</i>	
5.6: Queuing Network Models of Packet Switching Networks: Part 1: Open Networks	311
<i>J.W. Wong and S.S. Lam (Performance Evaluation, Volume 2, 1982, pages 9-21)</i>	
5.7: Queuing Network Models of Packet Switching Networks: Part 2: Networks with Population Size Constraints	324
<i>S.S. Lam and J.W. Wong (Performance Evaluation, Volume 2, 1982, pages 161-180)</i>	
Chapter 6: Network and Internetwork Communication Services	345
<i>S.S. Lam</i>	
6.1: X.25 Interface and End-To-End Virtual Circuit Service Characteristics	349
<i>A. Rybczynski (IEEE Transactions on Communications, April 1980, pages 500-510)</i>	
6.2: Issues in Packet-Network Interconnection	360
<i>V.G. Cerf and P.T. Kirstein (Proceedings of the IEEE, November 1978, pages 180-202)</i>	
6.3: Packet Fragmentation in Inter-Network Protocols	383
<i>J. Shoch (Computer Networks, February 1979, pages 3-8)</i>	
6.4: Inter-Network Naming, Addressing, and Routing	389
<i>J.F. Shoch (The Proceedings of the COMPCON F78 Conference, 1978, pages 72-79)</i>	
6.5: The ARPA Internet Protocol	397
<i>J.B. Postel, C.A. Sunshine, and D. Cohen (Computer Networks, Volume 5, 1981, pages 261-271)</i>	
6.6: X.75 Internetworking of Datapac and Telenet	408
<i>M.S. Unsoy and T.A. Shanahan (Proceedings of the Seventh Data Communications Symposium, 1981, pages 232-239)</i>	
6.7: A Protocol for Packet Network Intercommunication	416
<i>V.G. Cerf and R.E. Kahn (IEEE Transactions on Communications, May 1974, pages 637-648)</i>	
6.8: Reliable Host-to-Host Protocols: Problems and Techniques	428
<i>L.L. Garlick, R. Rom, and J.B. Postel (Proceedings of the Fifth Data Communications Symposium, 1977, pages 4-58—4-65)</i>	

6.9: Connection Management in Transport Protocols	436
<i>C.A. Sunshine and Y.K. Dalal (Computer Networks, December 1978, pages 454-473)</i>	
6.10: Using Encryption for Authentication in Large Networks of Computers	456
<i>R.M. Needham and M.D. Schroeder (Communications of the ACM, December 1978, pages 993-999)</i>	
Chapter 7: Formal Methods for Protocol Verification and Construction	463
<i>S.S. Lam</i>	
7.1: Formal Techniques for Protocol Specification and Verification	467
<i>C. Sunshine (Computer, September 1979, pages 20-26)</i>	
7.2: Protocol Verification via Projections	474
<i>S.S. Lam and A.U. Shankar (IEEE Transactions on Software Engineering, July 1984, pages 325-342)</i>	
7.3: An Exercise in Constructing Multi-Phase Communication Protocols	493
<i>C.H. Chow, M.G. Gouda, and S.S. Lam (Proceedings of the ACM SIGCOMM'84 Conference, June 1984)</i>	
7.4: Time Dependent Communication Protocols	504
<i>A.U. Shankar and S.S. Lam</i>
