Homework 13

CS 331H

Due Monday, April 24

- 1. Show NP-completeness for each of the following problems. They are all simple, direct reductions from one of the problems we have shown to be NP-complete in class.
 - (a) Minimum set cover. You are given a set S, a collection of subsets $S_1, \ldots, S_n \subseteq S$, and an integer k. Does there exist a set of k subsets $T \subseteq [n]$ such that

$$\bigcup_{i \in T} S_i = S?$$

Hint (ROT-13): iregrk pbire.

- (b) Subgraph Isomorphism. You are given two graphs, G and H. Does G = (V_G, E_G) contain a subgraph isomorphic to H = (V_H, E_H)? That is, is there an injection f : V_H → V_G such that for every u, v ∈ V_H, (u, v) ∈ E_H if, and only if, (f(u), f(v)) ∈ E_G? Hint (ROT-13): Znk pyvdhr be vaqrcraqrag frg.
- (c) **Partition**. You are given a set of *n* positive integers $x_1, \ldots, x_n \in \mathbb{Z}^+$. Does there exist a subset $S \subseteq [n]$ such that

$$\sum_{i \in S} x_i = \sum_{i \in [n] \setminus S} x_i?$$

Hint (ROT-13): fhofrg fhz. Extra hint: Lbh jvyy jnag gb nqq n fvatyr rkgen vagrtre gb gur vachg.

2. The problem ALLORNOTHINGSAT asks, given a 3CNF boolean formula, whether there is an assignment to the variables such that each clause either has three True literals or has three False literals.

Describe a polynomial time algorithm for ALLORNOTHINGSAT.
