

CS 343H: Artificial Intelligence

Week 1a: Introduction

Good Morning Colleagues

- Welcome to a fun, but challenging course
- Goal: Learn about Artificial Intelligence
 - Increase AI literacy
 - Prepare you for topics course
 - Breadth over depth

Teaching staff

- Prof. Peter Stone
- TA: Kim Houck

Today

- What is artificial intelligence?
- What can AI do?
- What is this course?

Sci-Fi AI?

Definition

- Artificial intelligence is...
 - The science of getting computers to do the things they can't do yet?
 - Finding fast algorithms for NP-hard problems?
 - Getting computers to do the things they do in the movies?
- No generally accepted definition...
- Textbook: autonomous agent

Science and engineering

- AI is one of the great intellectual adventures of the 20th and 21st centuries.
 - What is a mind?
 - How can a physical object have a mind?
 - Is a running computer (just) a physical object?
 - Can we build a mind?
 - Can trying to build one teach us what a mind is?

A (Short) History of AI

- 1940-1950: Early days
 - 1943: McCulloch & Pitts: Boolean circuit model of brain
 - 1950: Turing's "Computing Machinery and Intelligence"

A (Short) History of AI

- 1940-1950: Early days
 - 1943: McCulloch & Pitts: Boolean circuit model of brain
 - 1950: Turing's "Computing Machinery and Intelligence"
- 1950—70: Excitement: Look, Ma, no hands!
 - 1950s: Early AI programs, including Samuel's checkers program, Newell & Simon's Logic Theorist, Gelernter's Geometry Engine
 - 1956: Dartmouth meeting: "Artificial Intelligence" adopted
 - 1965: Robinson's complete algorithm for logical reasoning

A (Short) History of AI

- 1940-1950: Early days
 - 1943: McCulloch & Pitts: Boolean circuit model of brain
 - 1950: Turing's "Computing Machinery and Intelligence"
- 1950—70: Excitement: Look, Ma, no hands!
 - 1950s: Early AI programs, including Samuel's checkers program, Newell & Simon's Logic Theorist, Gelernter's Geometry Engine
 - 1956: Dartmouth meeting: "Artificial Intelligence" adopted
 - 1965: Robinson's complete algorithm for logical reasoning
- 1970—90: Knowledge-based approaches
 - 1969—79: Early development of knowledge-based systems
 - 1980—88: Expert systems industry booms
 - 1988—93: Expert systems industry busts: "AI Winter"

A (Short) History of AI

- 1940-1950: Early days
 - 1943: McCulloch & Pitts: Boolean circuit model of brain
 - 1950: Turing's "Computing Machinery and Intelligence"
- 1950—70: Excitement: Look, Ma, no hands!
 - 1950s: Early AI programs, including Samuel's checkers program, Newell & Simon's Logic Theorist, Gelernter's Geometry Engine
 - 1956: Dartmouth meeting: "Artificial Intelligence" adopted
 - 1965: Robinson's complete algorithm for logical reasoning
- 1970—90: Knowledge-based approaches
 - 1969—79: Early development of knowledge-based systems
 - 1980—88: Expert systems industry booms
 - 1988—93: Expert systems industry busts: "AI Winter"
- 1990—: Statistical approaches
 - Resurgence of probability, focus on uncertainty
 - General increase in technical depth
 - Agents and learning systems... "AI Spring"?
- 2000—: Where are we now?

Today

- What is artificial intelligence?

- What can AI do?

- What is this course?

What Can AI Do?

Quiz: Which of the following can be done at present?

- ✓ Play a decent game of table tennis?
- ✓ Play a decent game of Jeopardy?
- ✓ Drive safely along a curving mountain road?
- ? Drive safely along Sixth Street?
- ✓ Buy a week's worth of groceries on the web?
- ✗ Buy a week's worth of groceries at HEB?
- ? Discover and prove a new mathematical theorem?
- ✗ Converse successfully with another person for an hour?
- ? Perform a complex surgical operation?
- ✓ Put away the dishes and fold the laundry?
- ✓ Translate spoken Chinese into spoken English in real time?
- ✗ Write an intentionally funny story?

Unintentionally Funny Stories

- One day Joe Bear was hungry. He asked his friend Irving Bird where some honey was. Irving told him there was a beehive in the oak tree. Joe walked to the oak tree. He ate the beehive. The End.
- Henry Squirrel was thirsty. He walked over to the river bank where his good friend Bill Bird was sitting. Henry slipped and fell in the river. Gravity drowned. The End.

[Shank, Tale-Spin System, 1984]

Natural Language

- **Speech technologies**
 - Automatic speech recognition (ASR)
 - Text-to-speech synthesis (TTS)
 - Dialog systems

Image Classifier Demo

Upload your images to have them classified by a machine! Upload multiple images using the button below or dropping them on this page. The predicted objects will be refreshed automatically. Images are resized such that the smallest dimension becomes 256, then the center 256x256 crop is used. More about the demo can be found [here](#).

Pose & tracking

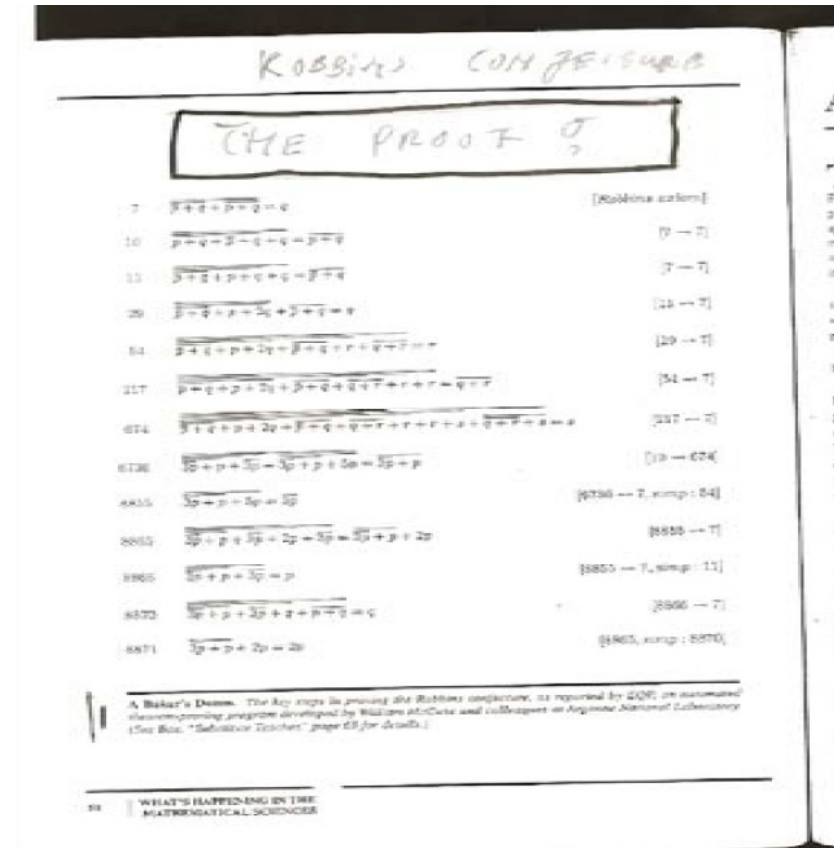

Robotics

- Robotics
 - Part mech. eng.
 - Part AI
 - Reality much harder than simulations!
- Technologies
 - Vehicles
 - Rescue
 - Soccer!
 - Lots of automation...
- In this class:
 - We ignore mechanical aspects
 - Methods for planning
 - Methods for control

Logic

- Logical systems
 - Theorem provers
 - NASA fault diagnosis
 - Question answering

Game Playing

- **May, '97: Deep Blue vs. Kasparov**
 - First match won against world-champion
 - “Intelligent creative” play
 - 200 million board positions per second!
 - Humans understood 99.9 of Deep Blue's moves
 - Can do about the same now with a big PC cluster
- **Open question:**
 - How does human cognition deal with the search space explosion of chess?
 - Or: how can humans compete with computers at all??
- **1996: Kasparov Beats Deep Blue**

“I could feel --- I could smell --- a new kind of intelligence across the table.”
- **1997: Deep Blue Beats Kasparov**

“Deep Blue hasn't proven anything.”

Decision Making

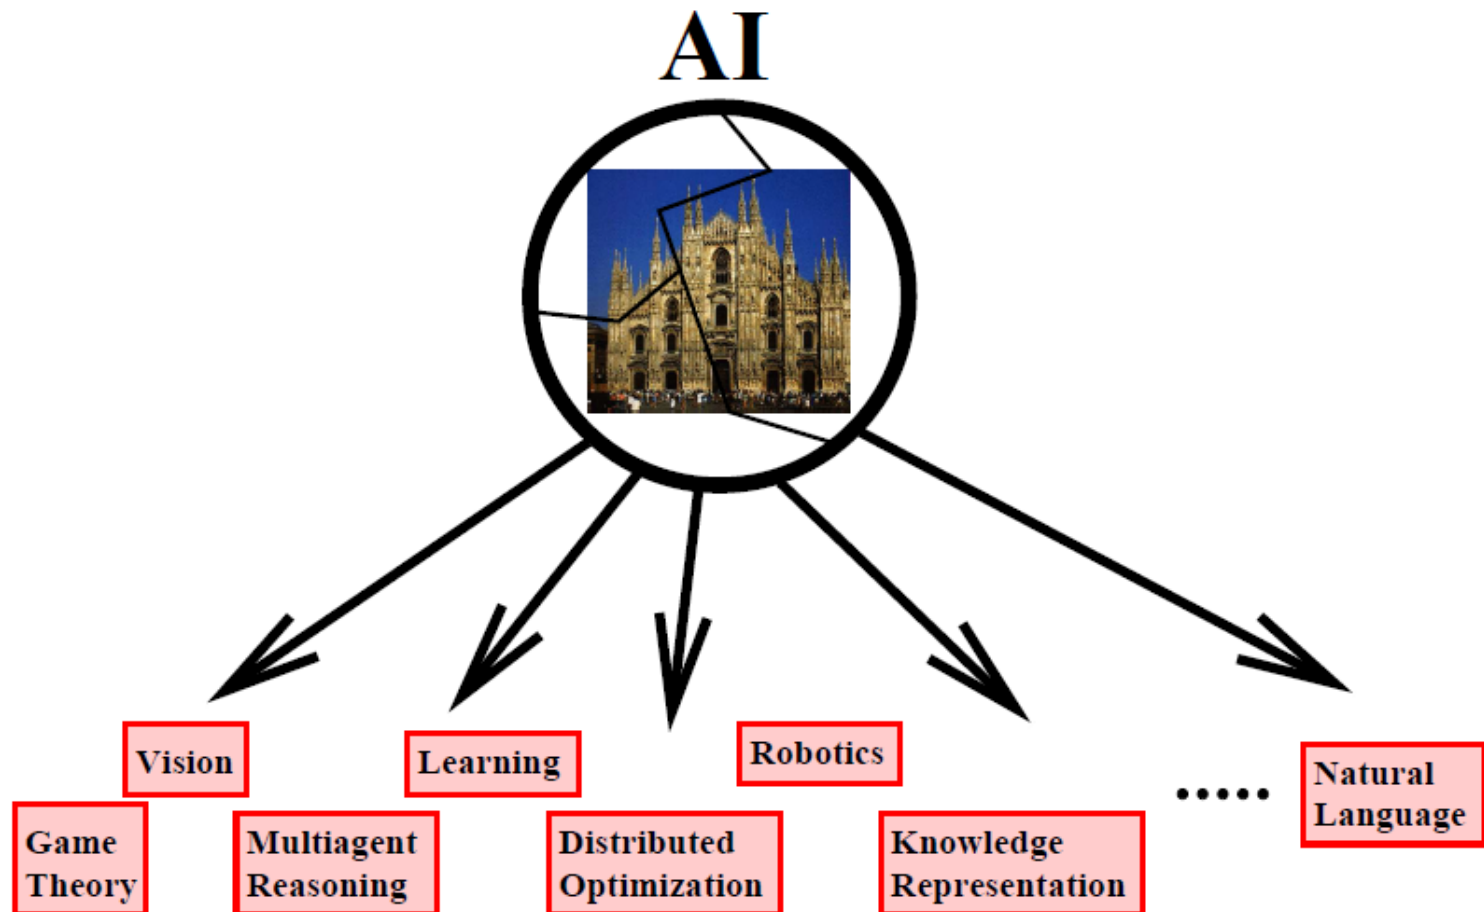

Applied AI involves many kinds of automation

- Scheduling, e.g. airline routing, military
- Route planning, e.g. mapquest
- Medical diagnosis
- Web search engines
- Spam classifiers
- Automated help desks
- Fraud detection
- Product recommendations
- ... Lots more!

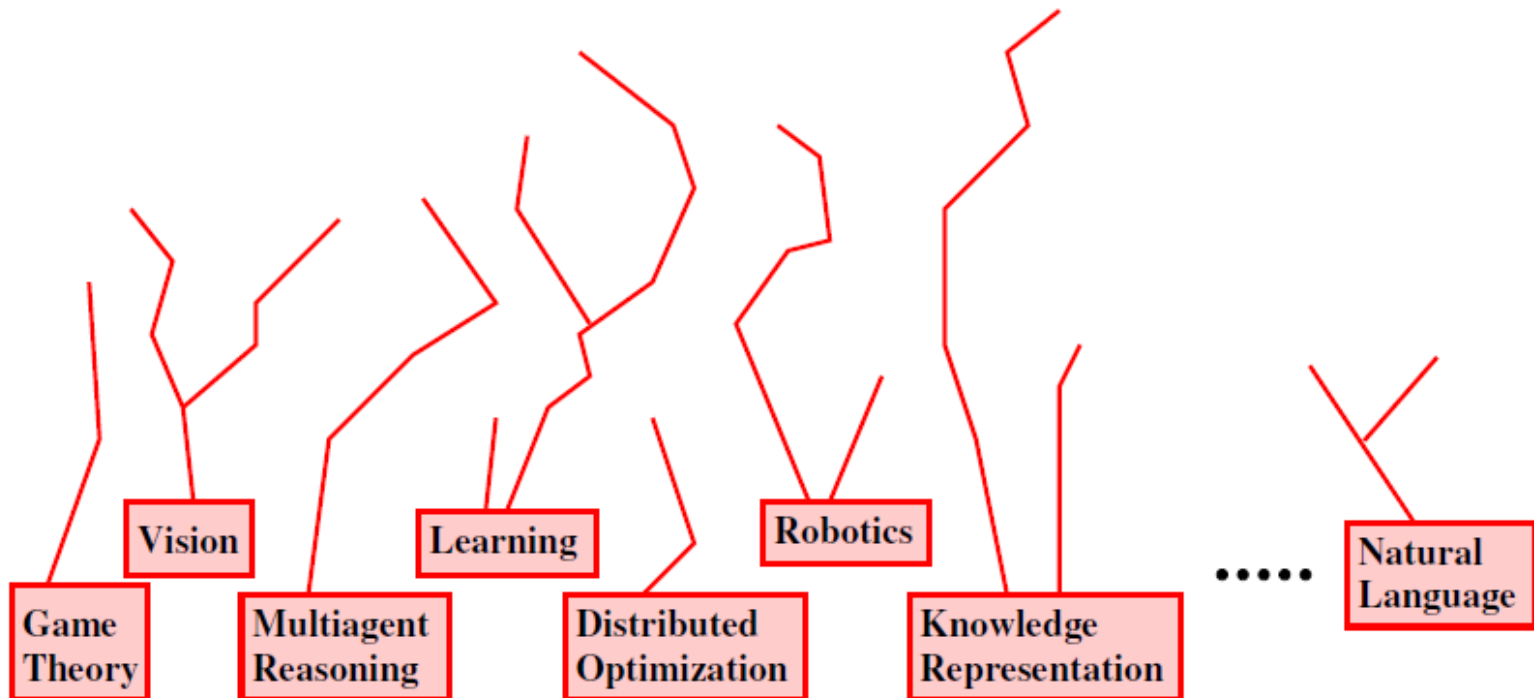

Strategy in AI

- A goal of AI: Robust, fully autonomous agents in the real world
- Bottom-up metaphor:
Russell, '95: *“Theoreticians can produce the AI equivalent of bricks, beams, and mortar with which AI architects can build the equivalent of cathedrals.”*

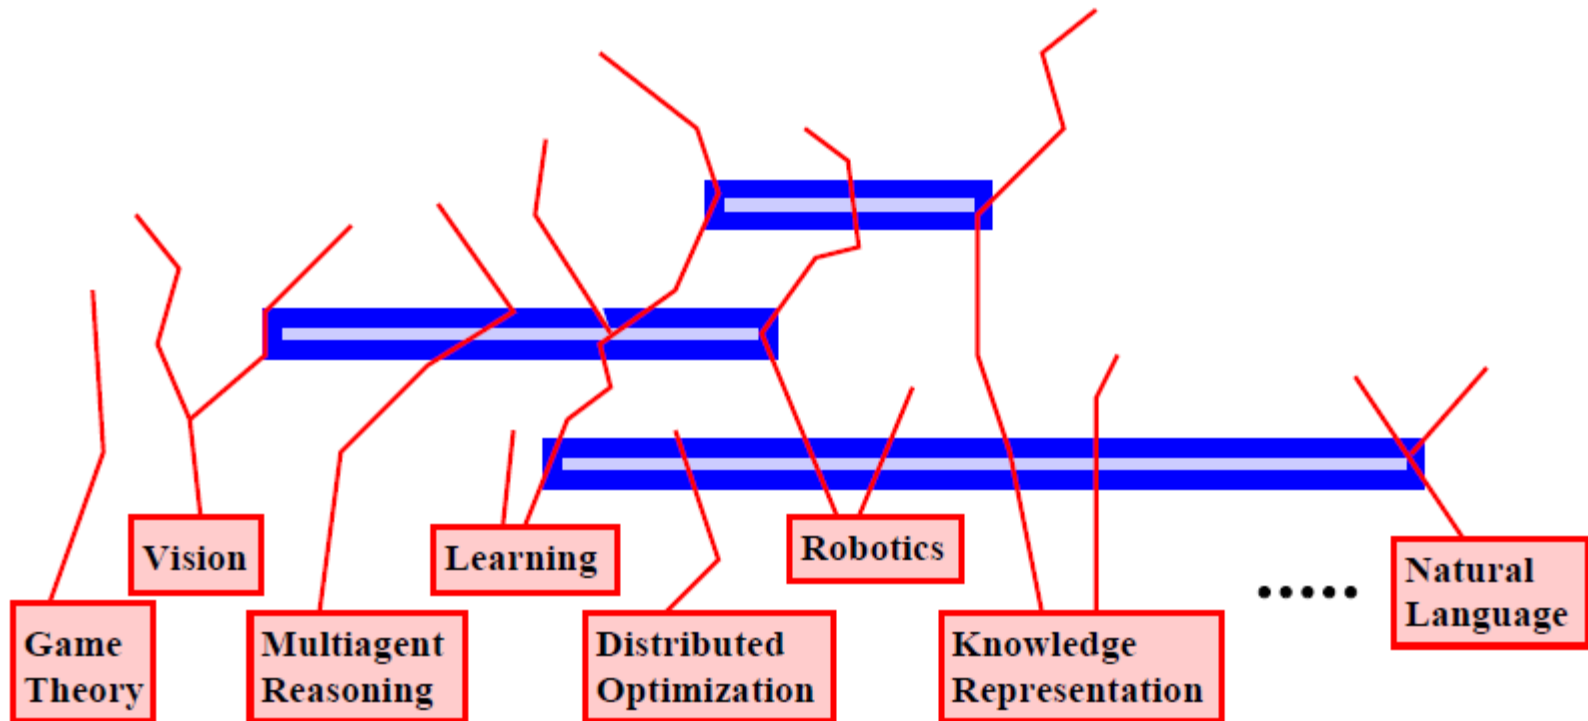

Bottom-up approach

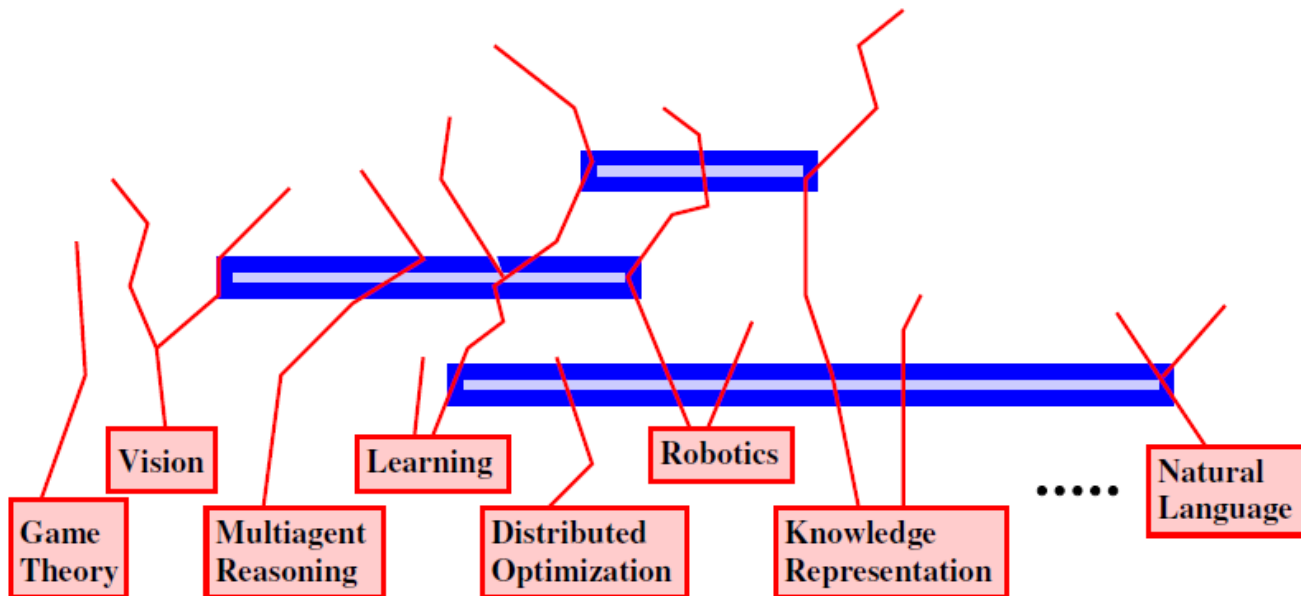

The bricks

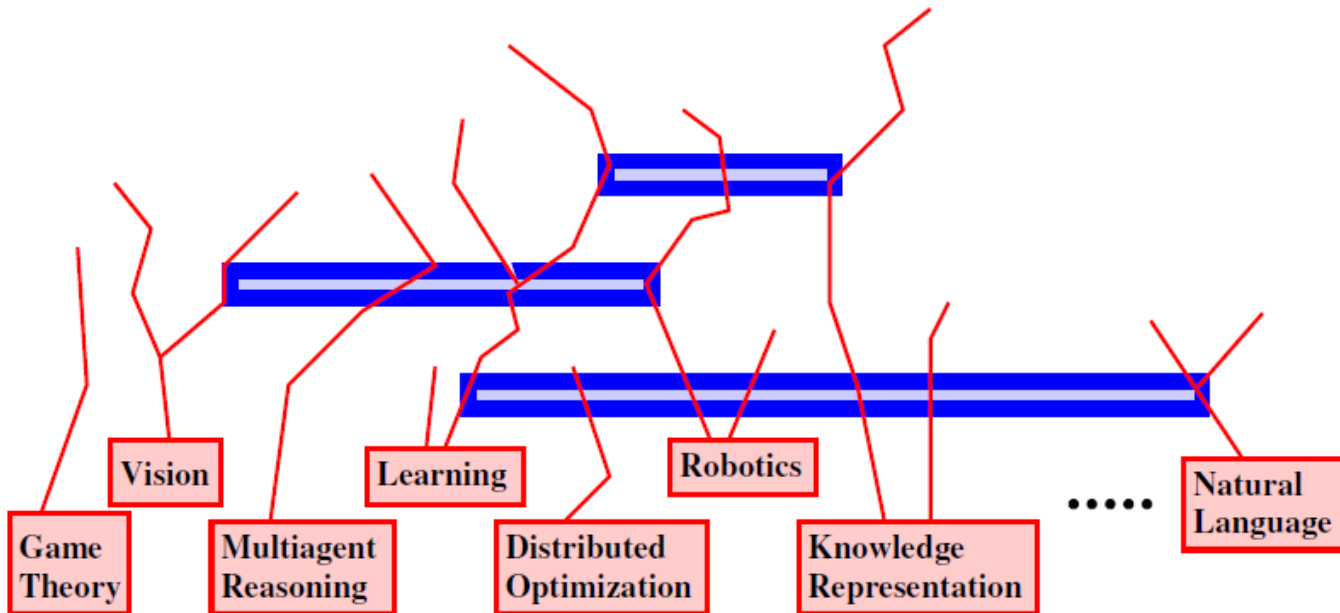

The beams and mortar

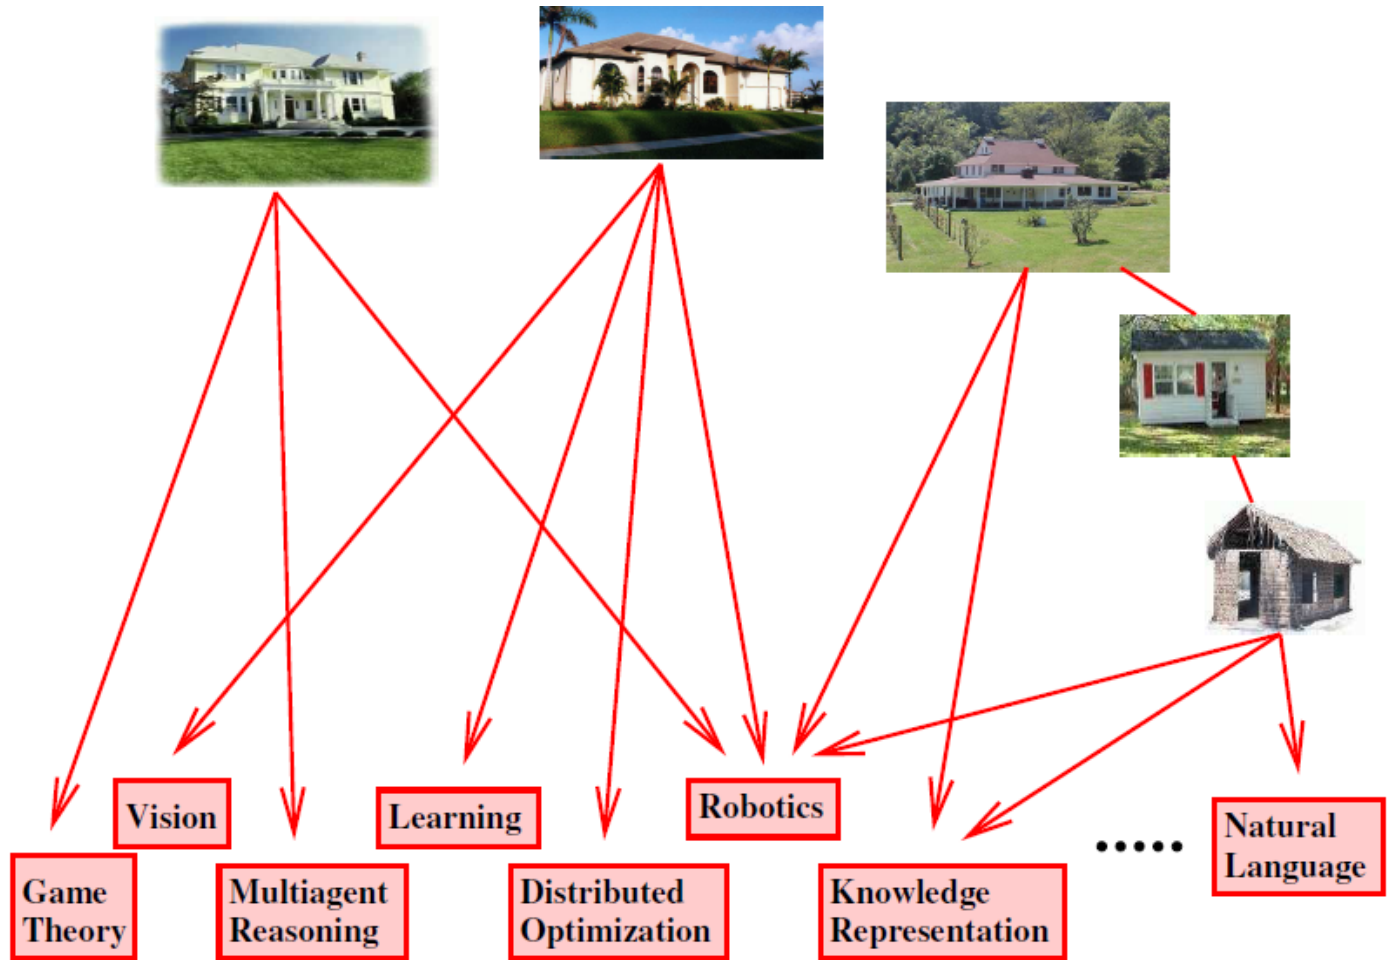

Towards and cathedral?

Or something else?

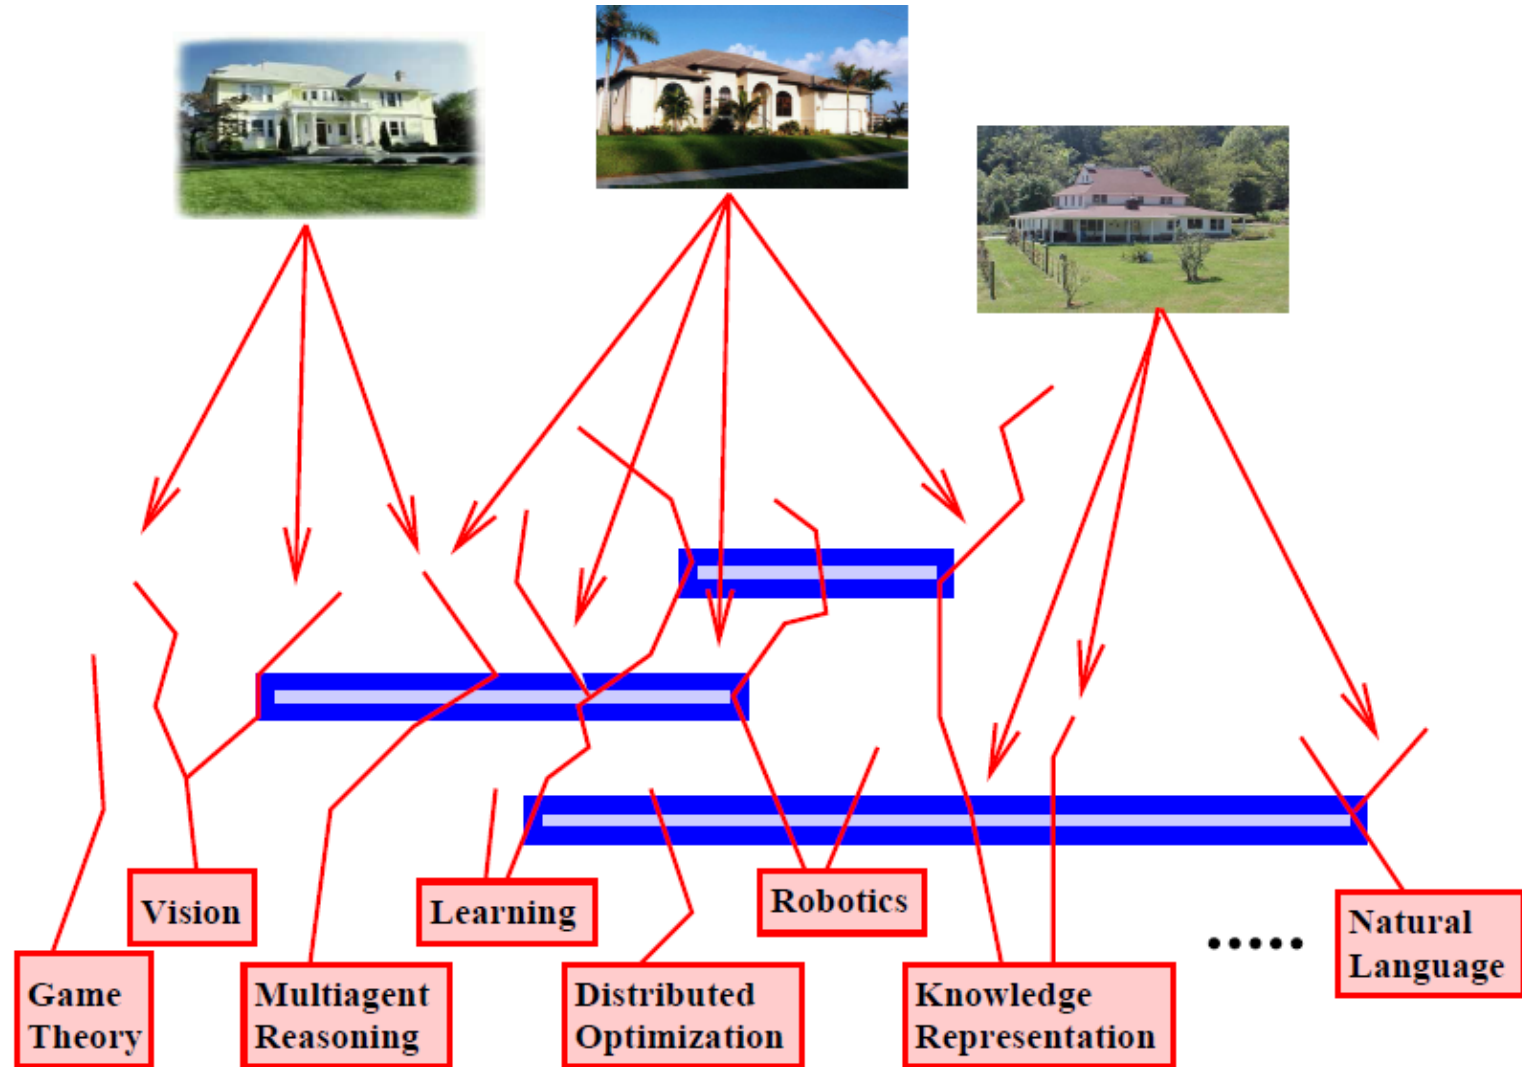

Top-down approach

“Good problems . . . produce good science” [Cohen, '04]

Meeting in the middle

Good problems produce good science

Manned flight

Apollo mission

Manhattan project

Autonomous vehicles

RoboCup soccer

Assistive robots

Ethics, implications

- Robust, fully autonomous agents in the real world
- What happens when we achieve this goal?

Some Hard Questions...

- Who is liable if a robot driver has an accident?
- Will machines surpass human intelligence?
- What will we do with superintelligent machines?
- Would such machines have conscious existence? Rights?
- Can human minds exist indefinitely within machines (in principle)?

Today

- What is artificial intelligence?
- What can AI do?
- What is this course?

Goal of this course

- Learn about Artificial Intelligence
 - Increase your AI literacy
 - Prepare you for topic courses and/or research

Course Topics

- Part I: Making Decisions
 - Fast search / planning
 - Adversarial and uncertain search
- Part II: Reasoning under Uncertainty
 - Bayes' nets
 - Decision theory
 - Machine learning
- Throughout: Applications
 - Natural language, vision, robotics, games, ...

Overview of syllabus

- Official syllabus is online

Workload summary

- Readings due at least once per week
- Brief written responses for every reading (15%)
sent to professor and TA
- Class attendance and participation (10%)
- Assignments (mostly programming) (35%)
using Piazza for discussion/questions
- Midterm (15%)
- Final (25%)

Questions?

Course enrollment

- Course is for honors CS students
- If you want to enroll but are not registered, please inquire with the CS undergraduate office (first floor of GDC).

Assignments

- Read the syllabus
- Enroll on Piazza
- Post something on Piazza
- Reading assignment & email by Wed 8 pm
- Start first programming assignment – python tutorial (PS0), due 1/29
 - Complete it independently; no pairs.

Some AI successes

- Deep Blue beats Kasparov
- Sojourner, Spirit, and Opportunity explore Mars
- iRobot Roomba automated vacuum cleaner
- Automated speech/language systems for airline travel
- Spam filters using machine learning
- Usable machine translation through Google
- Watson wins at Jeopardy
