

Physics Problem Set Solutions

- (a) Momentum increases by a factor of 3.

(b) Kinetic energy increases by a factor of 9.
- (a) The acceleration due to gravity doubles.

(b) The acceleration due to gravity becomes 1/4th.
- (a) Time to hit the ground = $\sqrt{2 * \text{height} / g} = \sqrt{2 * 45 / 9.81} \approx 3.03 \text{ s}$.

(b) Horizontal distance = velocity * time $\approx 20 * 3.03 = 60.6 \text{ m}$.
- (a) Angular frequency $\omega = 2\pi f = 2\pi * 140 \approx 879.6 \text{ rad/s}$.

(b) Maximum speed = $\omega * x_{\text{max}} = 879.6 * 0.0013 \approx 1.14 \text{ m/s}$.
- (a) Distance = $v^2 / (2 * a * g) \approx 6.5^2 / (2 * 0.2 * 9.81) \approx 10.8 \text{ m}$.

(b) Work done by friction = $\mu * m * g * d \approx 0.2 * m * 9.81 * 10.8$.
- (a) Linear acceleration = $(2/3) * g * \sin(\theta)$.

(b) Speed at the bottom = $\sqrt{2 * g * \sin(\theta) * \text{ramp length}} \approx \sqrt{2 * 9.81 * \sin(30^\circ) * 5}$.
- (a) $g \text{ at altitude} / g \text{ at surface} = (R / (R + h))^2 \approx (6371 / (6371 + 295))^2 \approx 0.933$.

(b) Orbital speed = $\sqrt{GM / r}$.
- (a) Potential energy = $(1/2) * k * x^2 = (1/2) * 200 * 0.5^2 = 25 \text{ J}$.

(b) Speed = $\sqrt{2 * PE / m} \approx \sqrt{2 * 25 / 2} \approx 5 \text{ m/s}$.
- (a) Period $T = 2\pi * \sqrt{L / g} \approx 2\pi * \sqrt{2.5 / 9.81} \approx 3.17 \text{ s}$.

(b) Doubling the length increases the period by $\sqrt{2}$.
- (a) Centripetal force = $m * v^2 / r \approx 1500 * 25^2 / 200 = 4687.5 \text{ N}$.

(b) Work done = 0 (force is perpendicular to displacement).
