

Recap: BERT

- FP check-in due today, will be returned soon
- A4 back today, A5 back soon
- eCIS evaluations: please fill these out

Announcements

Multilinguality

- Other languages present some challenges not seen in English at all!
- Some of our algorithms have been specified to English
 - Some structures like constituency parsing don't make sense for other languages
 - Neural methods are typically tuned to English-scale resources, may not be the best for other languages where less data is available
- Question:
 - 1) What other phenomena / challenges do we need to solve?

2) How can we leverage existing resources to do better in other languages without just annotating massive data?

Dealing with other languages

- Morphological richness: effects and challenges
- Morphology tasks: analysis, inflection, word segmentation
- Cross-lingual tagging and parsing
- Cross-lingual word representations

This Lecture

Morphology

- Study of how words form
- Derivational morphology: create a new *lexeme* from a base estrange (v) => estrangement (n) become (v) => unbecoming (adj)
 - May not be totally regular: enflame => inflammable
- Inflectional morphology: word is inflected based on its context
 - I become / she becomes
 - Mostly applies to verbs and nouns

What is morphology?

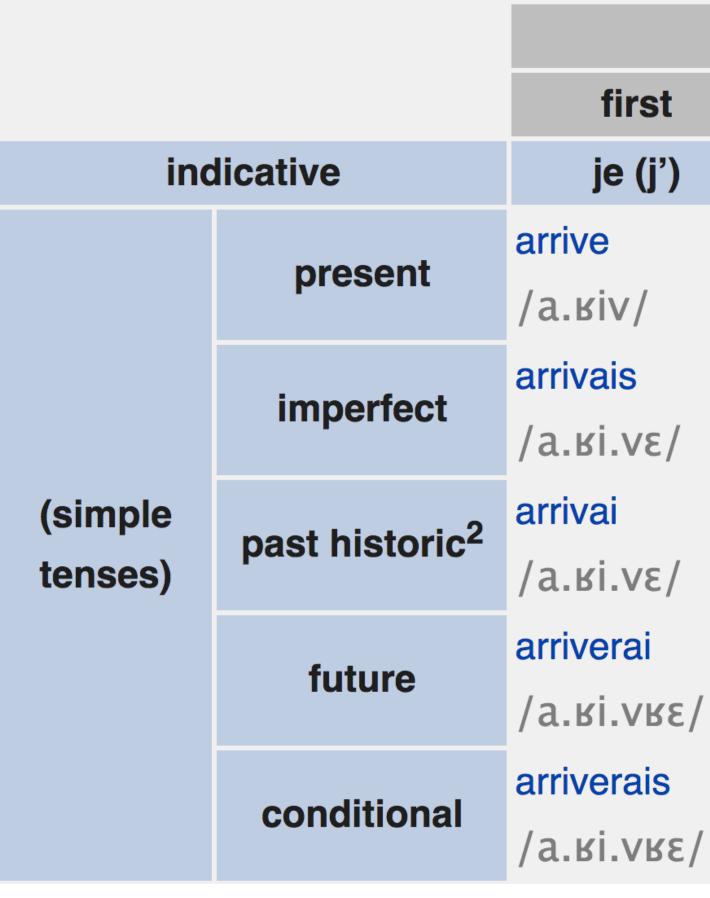

Morphological Inflection

In English: I arrive you arrive

we arrive you arrive

In French:

he/she/it arrives they arrive

[X] arrived

	singular			plural	
	second	third	first	second	thi
	tu	il, elle	nous	vous	ils, e
	arrives	arrive	arrivons	arrivez	arrivent
	/a.ĸiv/	/a.ĸiv/	/a.ʁi.vɔ̃/	/a.ĸi.ve/	/a.ĸiv/
	arrivais	arrivait	arrivions	arriviez	arrivaie
	/а.кі.vε/	/a.ĸi.vɛ/	/a.ʁi.vjɔ̃/	/a.ʁi.vje/	/а.кі.v
	arrivas	arriva	arrivâmes	arrivâtes	arrivère
	/a.ʁi.va/	/a.ĸi.va/	/a.ʁi.vam/	/a.ʁi.vat/	/а.кі.v
	arriveras	arrivera	arriverons	arriverez	arrivero
/	/a.ĸi.vĸa/	/a.ĸi.vĸa/	/a.ĸi.vĸɔ̃/	/a.ĸi.vĸe/	/а.кі.v
	arriverais	arriverait	arriverions	arriveriez	arrivera
1	/a.ĸi.vĸɛ/	\a.ĸi.vĸε\	/a.ĸi.və.ĸjɔ̃/	/a.ĸi.və.ĸje/	/а.кі.v

Morphological Inflection

In Spanish:

			singular			plural				
		1st person	2nd person	3rd person	1st person	2nd person	3rd person			
		уо	tú	él/ella/ello	nosotros	vosotros	ellos/ellas			
		-	VOS	usted	nosotras	vosotras	-			
	present	llego	llegas ^{tú} llegás ^{vos}	llega	llegamos	llegáis	llegan			
indicative	imperfect	llegaba	llegabas	llegaba	llegábamos	llegabais	llegaban			
	preterite	llegué	llegaste	llegó	llegamos	llegasteis	llegaron			
	future	llegaré	llegarás	llegará	llegaremos	llegaréis	llegarán			
	conditional	llegaría	llegarías	llegaría	llegaríamos	llegaríais	llegarían			

Not just verbs either; gender, number, case complicate things

Declension of Kind									
			singular	plural					
	indef. def. noun				noun				
nominative	ein	n das Kind		die	Kinder				
genitive	eines	des	Kindes, Kinds	der	Kinder				
dative	dative einem dem		Kind, Kinde ¹	den	Kindern				
accusative	ein das Kind		die	Kinder					

- Nominative: I/he/she, accusative: me/him/her, genitive: mine/his/hers
- Dative: merged with accusative in English, shows recipient of something I taught the children <=> Ich unterrichte die Kinder
 - I give the children a book <=> Ich gebe den Kindern ein Buch

Noun Inflection

Irregular Inflection

- Common words are often irregular I am / you are / she is
 - Je suis / tu es / elle est
 - Soy / está / es
- Less common words typically fall into some regular paradigm these are somewhat predictable

Agglutinating Langauges

 Finnish/Hungarian (Finno-Ugric), also Turkish: what a preposition would do in English is instead part of the verb

					indicative mood present tense			perfect

SYNTHESIS LECTURES ON HUMAN LANGUAGE TECHNOLOGIES

Graeme Hirst, Series Editor

Morphologically-Rich Languages

Great resources for challenging your assumptions about language and for understanding multilingual models!

Morphological Analysis/Inflection

Morphological Analysis

- Affects parsing, translation, ...
- morphological features explicitly
- How to do this kind of morphological analysis?

In English, lexical features on words and word vectors are pretty effective

In other languages, lots more unseen words due to rich morphology!

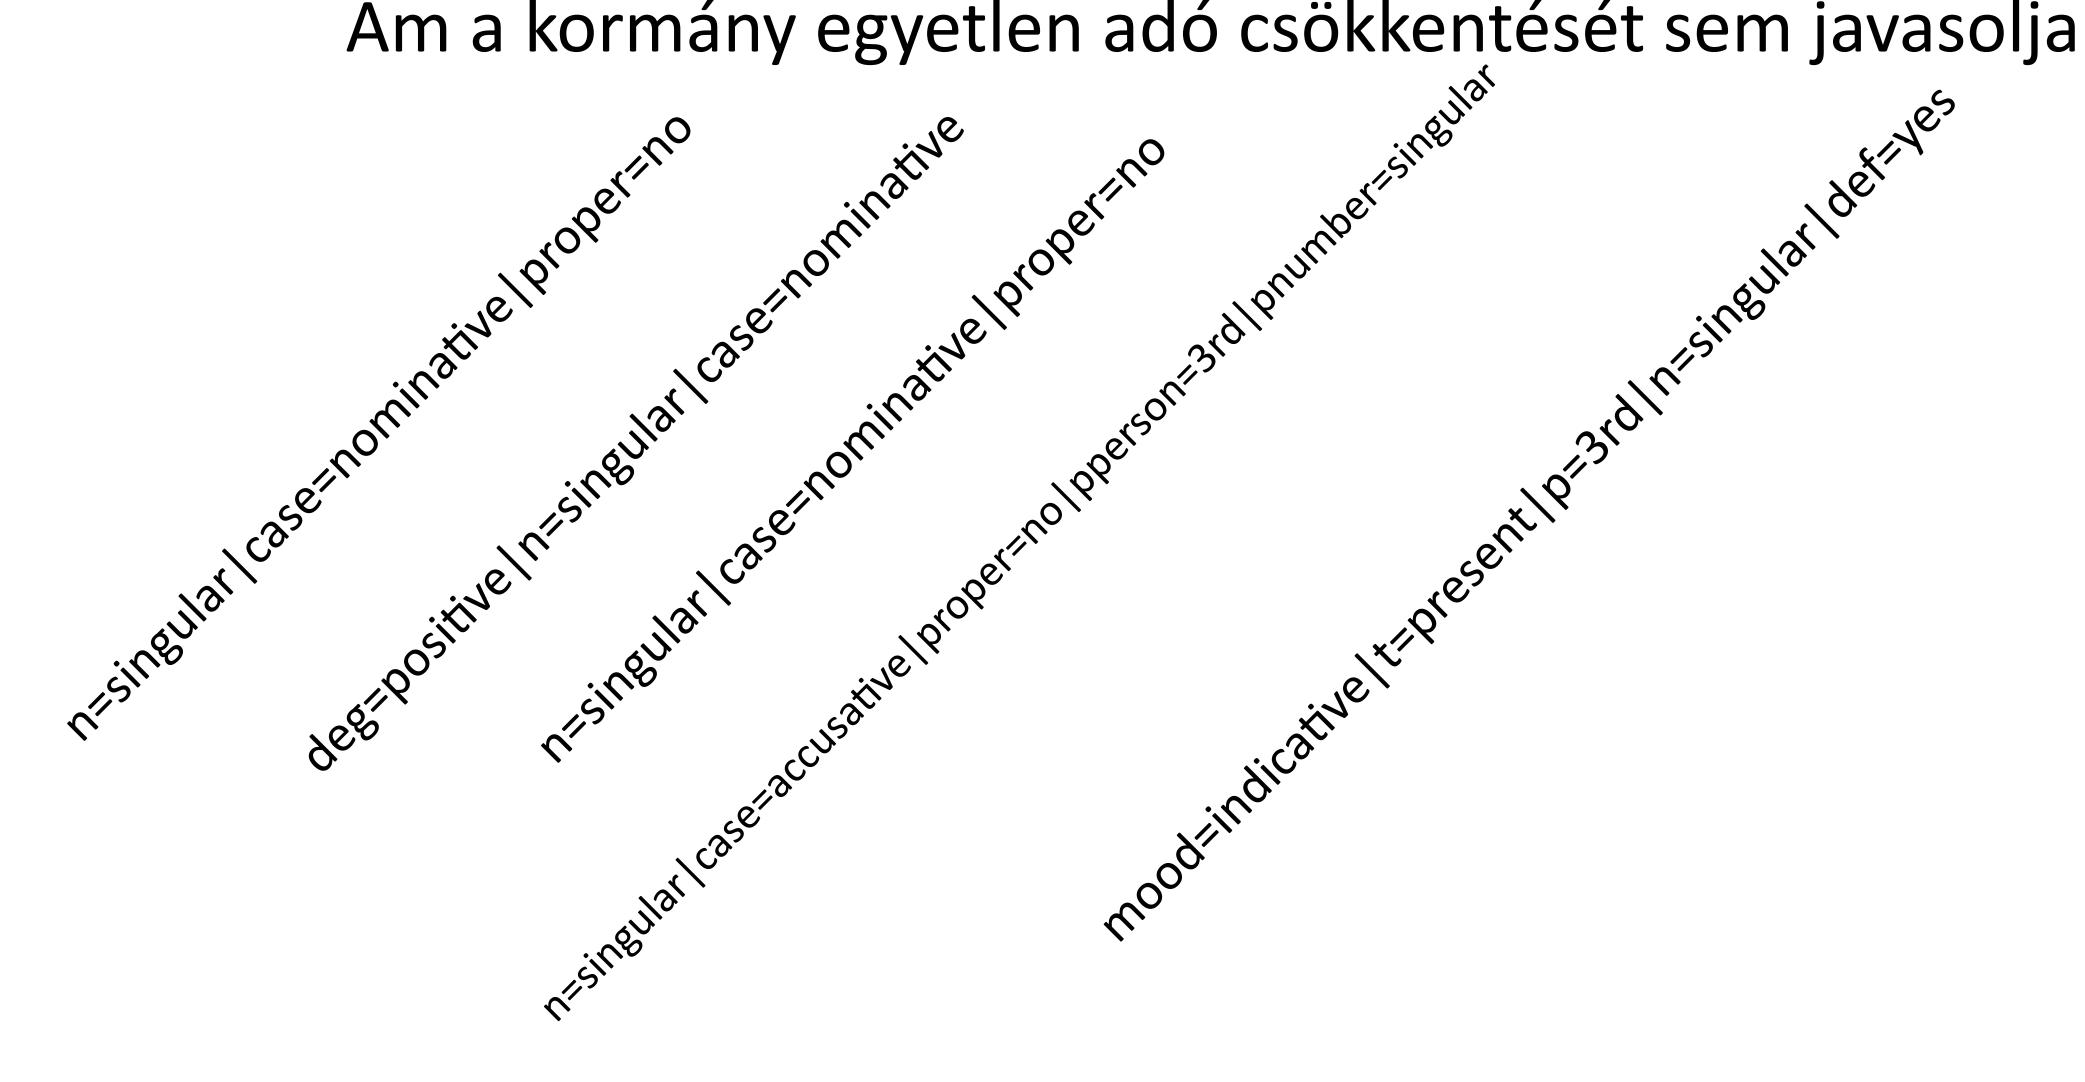

When we're building systems, we probably want to know base form +

Morphological Analysis: Hungarian

But the government does not recommend reducing taxes. Ám a kormány egyetlen adó csökkentését sem javasolja.

Morphological Analysis

- Given a word in context, need to are
- Basic approach: combines two modules:
 - Lexicon: tells you what possibilities are for the word
 - Analyzer: statistical model that disambiguates
- Models are largely CRF-like: score morphological features in context
- Lots of work on Arabic inflection (high amounts of ambiguity)

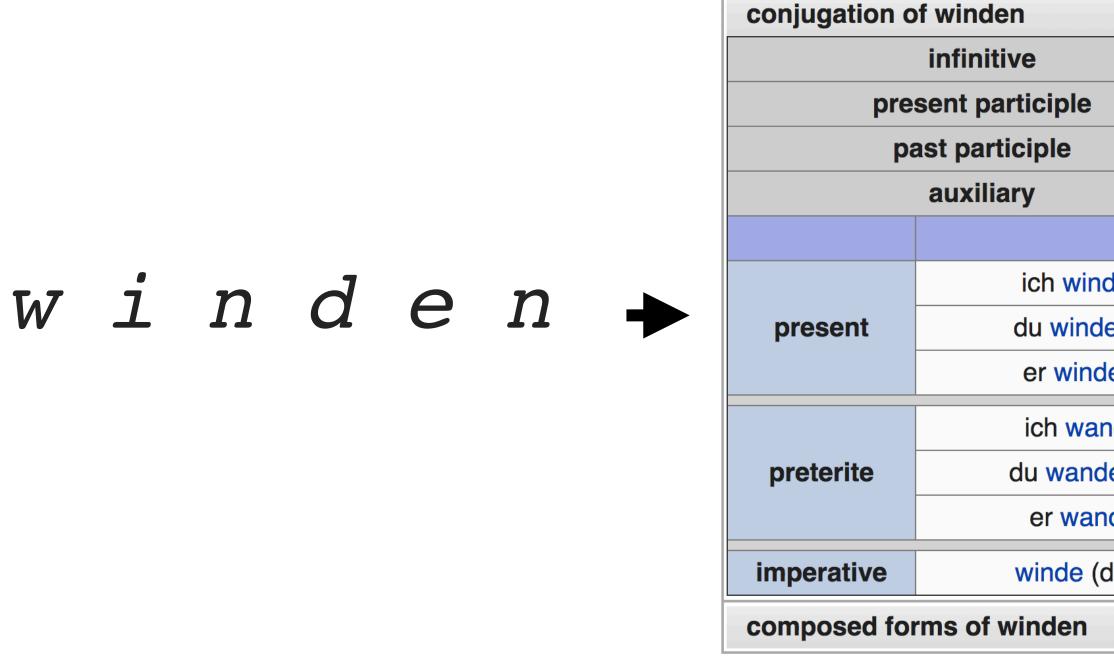

Given a word in context, need to predict what its morphological features

ع

Morphological Inflection

Inverse task of analysis: given base form + features, inflect the word Hard for unknown words — need models that generalize

				[]

				[s							

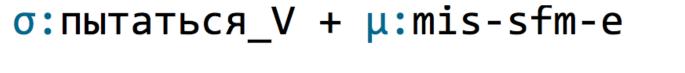

Durrett and DeNero (2013)

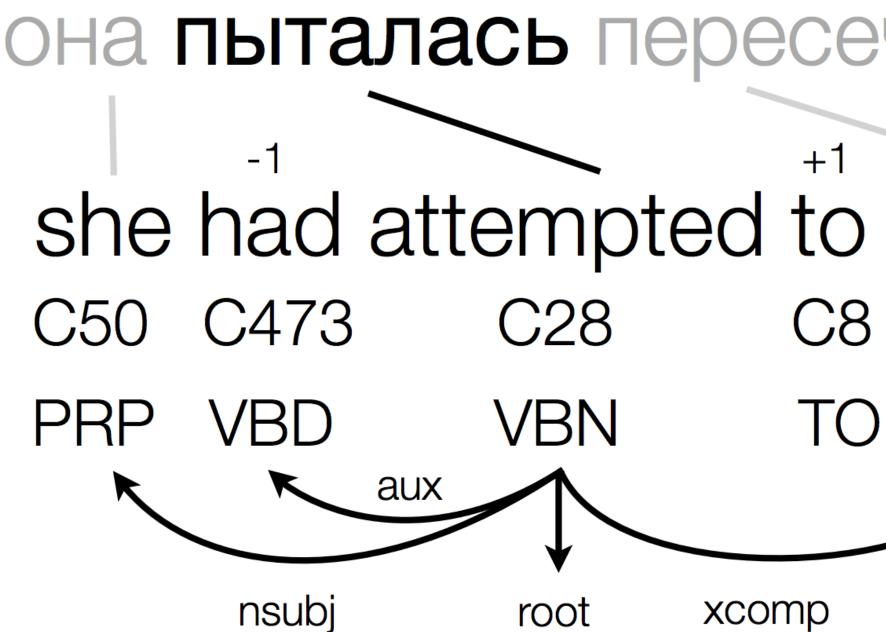

Morphological Inflection

- inflection based on source side

она пыталась пересечь пути на ее велосипеде she had attempted to cross the road on her bike C8 C275 C37 C43 C82 C94 C331 TO VB DT NN IN PRP\$ NN

Machine translation where phrase table is defined in terms of lemmas "Translate-and-inflect": translate into uninflected words and predict

Chahuneau et al. (2013)

Chinese Word Segmentation

- Word segmentation: some languages including Chinese are totally untokenized
- LSTMs over character embeddings / character bigram embeddings to predict word boundaries
- Having the right segmentation can help machine translation

多少 冬天 (winter), 能 (can) 穿 (wear) (amount) 穿 (wear) 多少 (amount); 夏天 (summer), 能 (can) 穿 (wear) 多 (more) 少 (little) 穿 (wear) 多 (more) 少 (little)。 Without the word "夏天 (summer)" or "冬天 (winter)", it is difficult to segment the phrase "能 穿多少穿多少".

• separating nouns and pre-modifying adjectives: 高血压 (high blood pressure) \rightarrow 高(high) 血压(blood pressure)

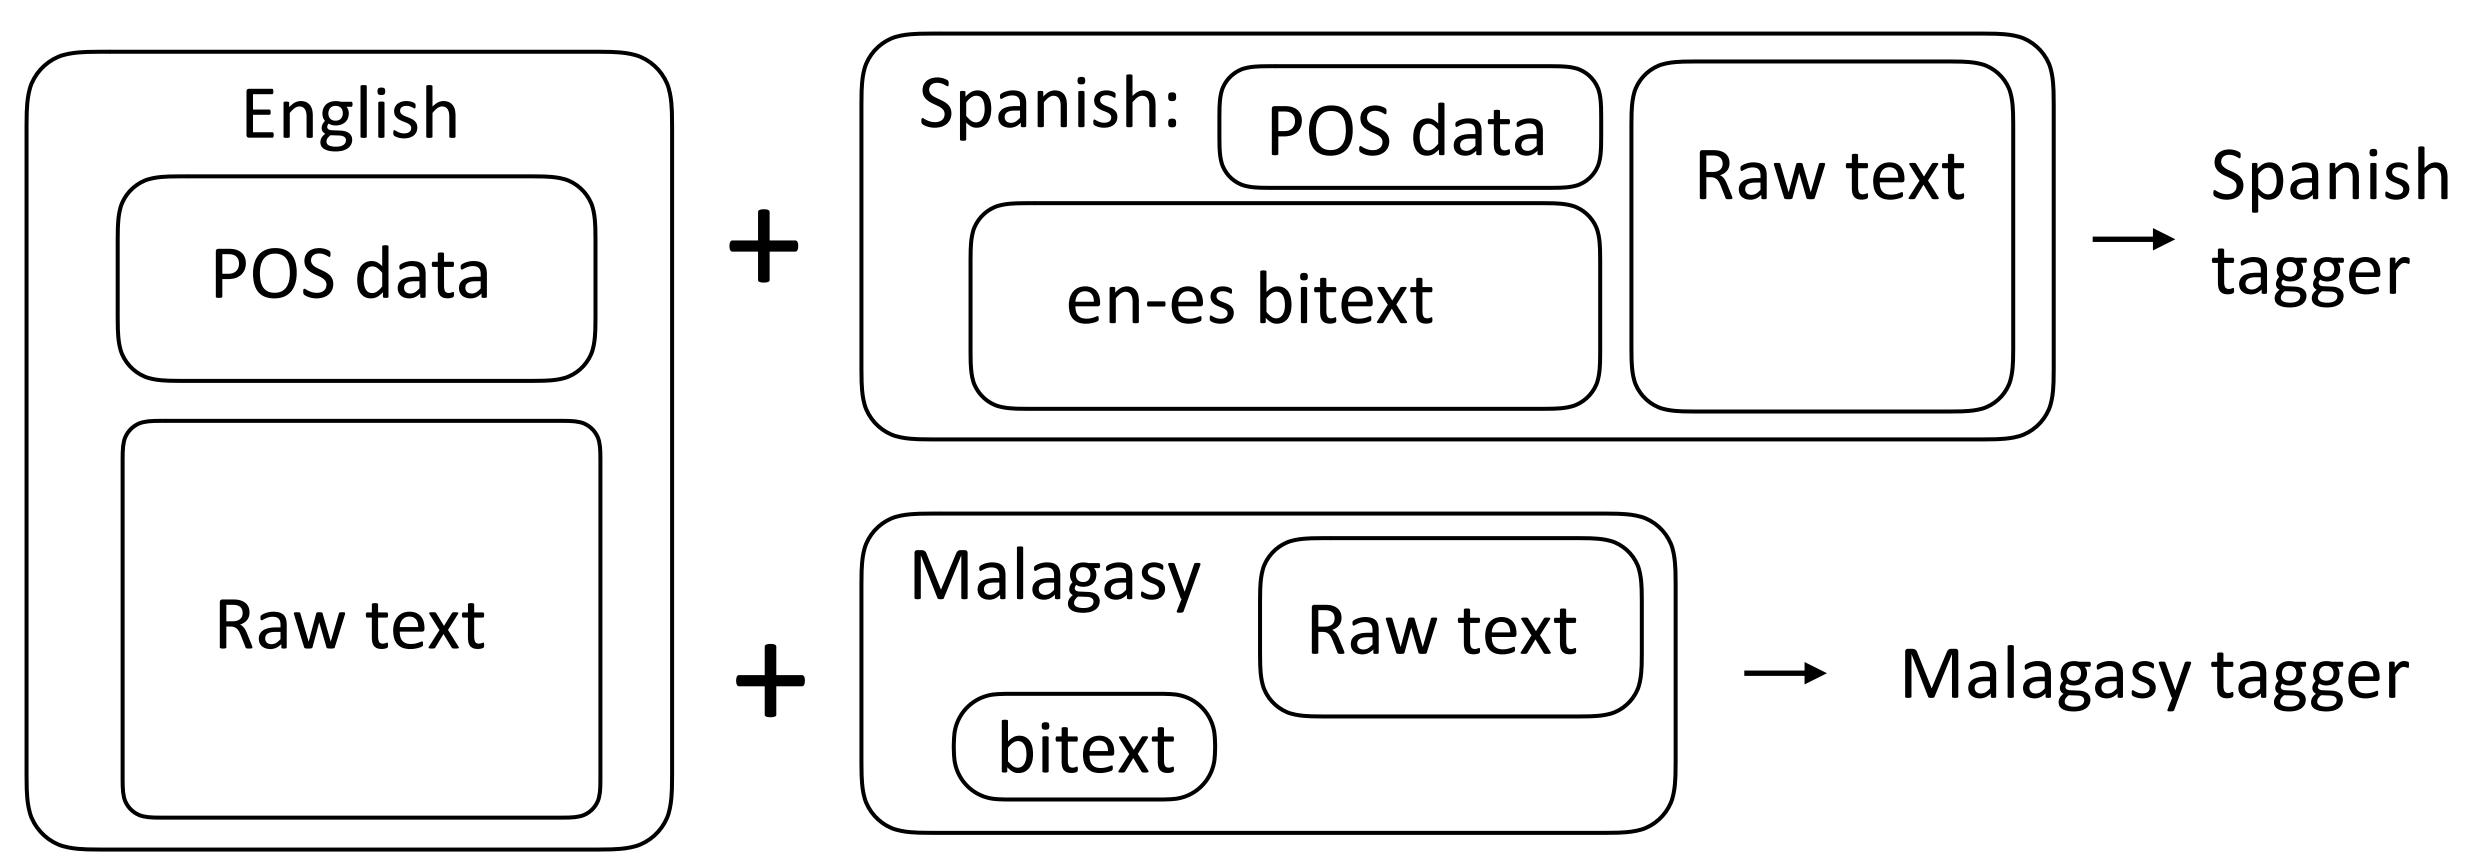

• separating compound nouns: 内政部 (Department of Internal Affairs) \rightarrow 内政(Internal Affairs) 部(Department).

Cross-Lingual Tagging and Parsing

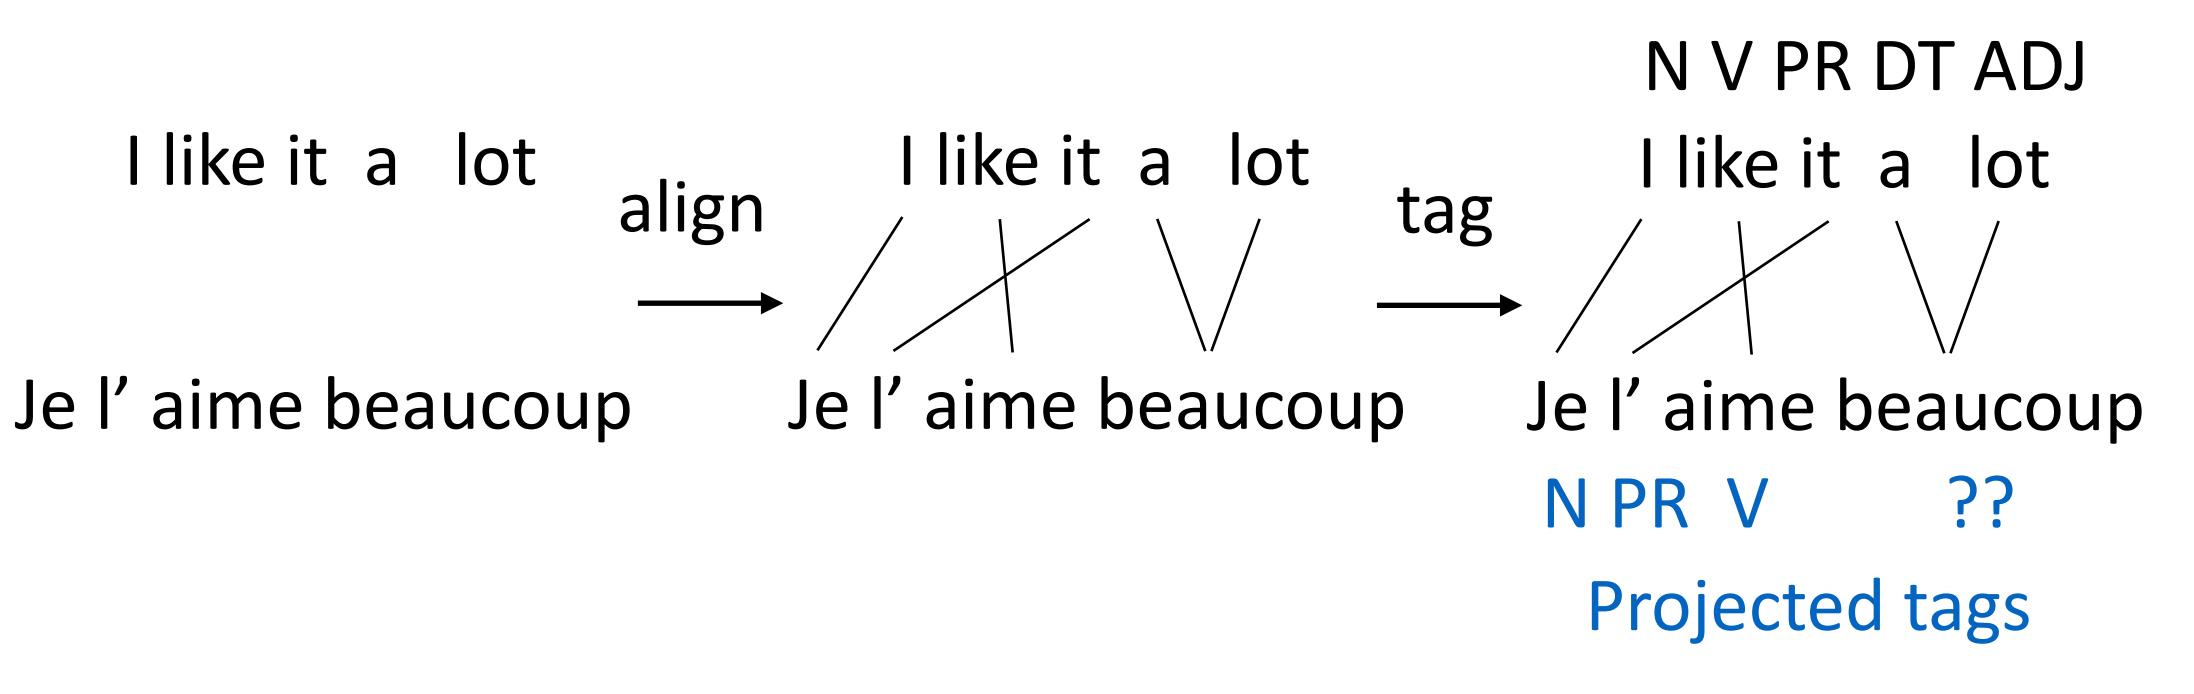

- Labeling POS datasets is expensive
- Can we transfer annotation from high-resource languages (English, etc.) to *low-resource* languages?

Cross-Lingual Tagging

Can we leverage word alignment here?

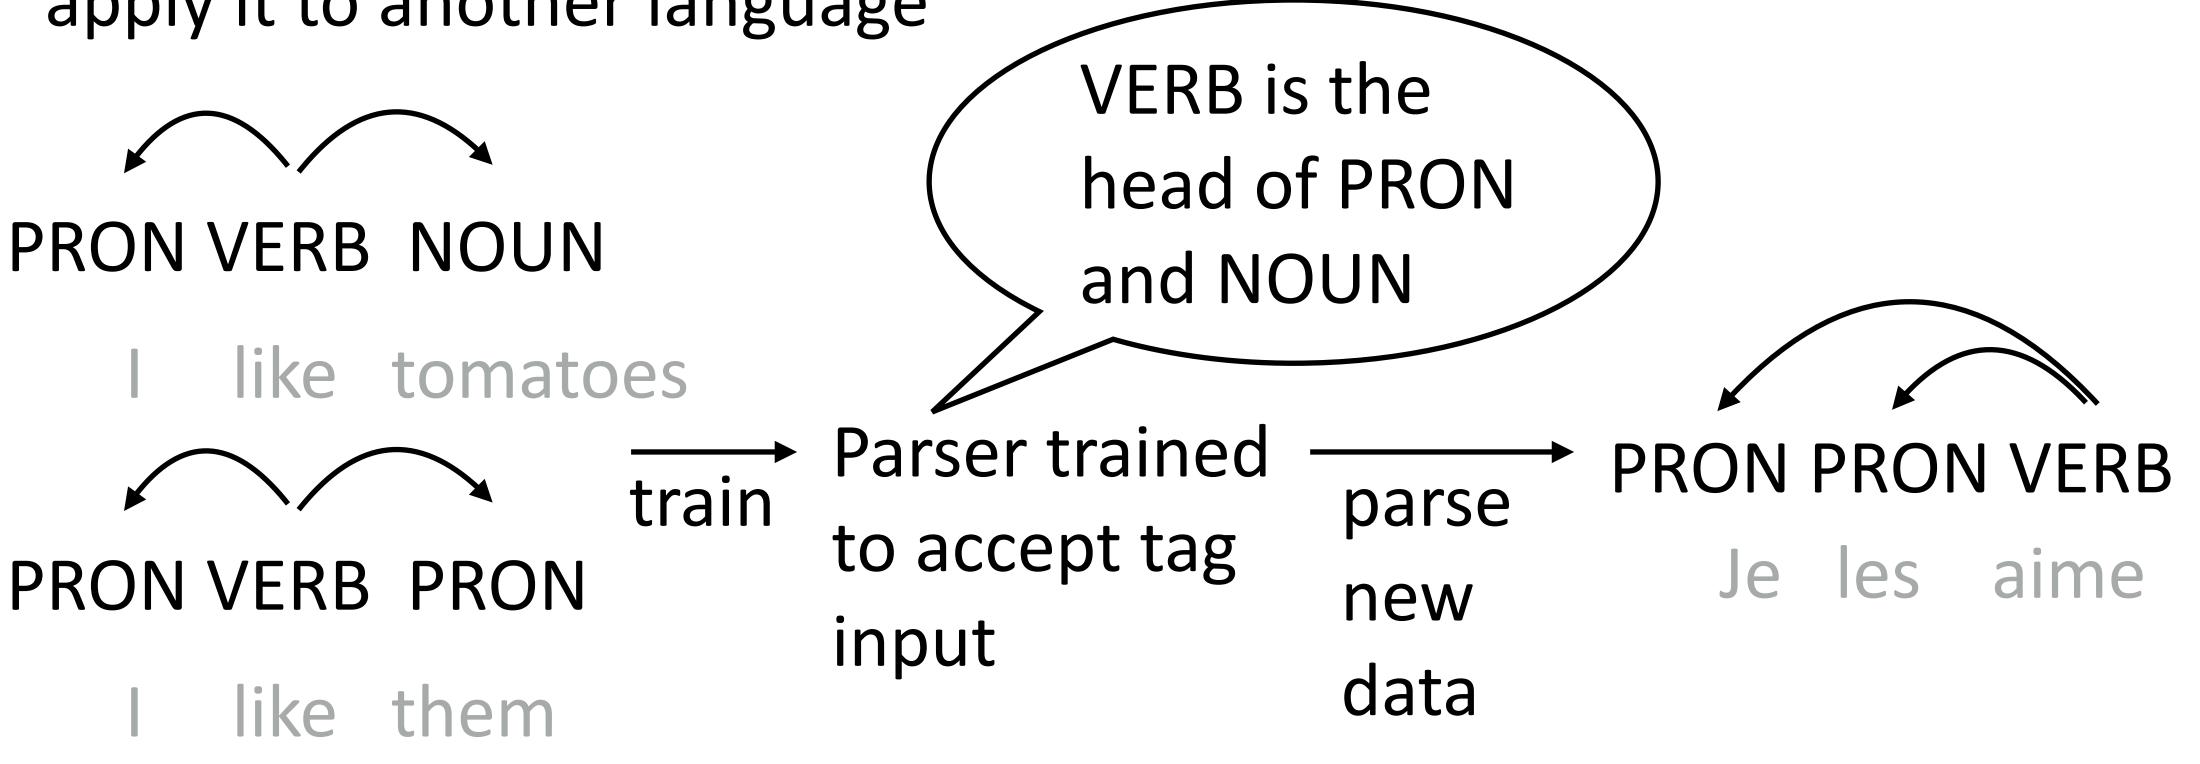

Tag with English tagger, project across bitext, train French tagger? Works pretty well

Cross-Lingual Tagging

Das and Petrov (2011)

- apply it to another language

Cross-Lingual Parsing

Now that we can POS tag other languages, can we parse them too?

Direct transfer: train a parser over POS sequences in one language, then

McDonald et al. (2011)

	best-source		avg-source	gold	I-POS	pred-POS

- target language
- Multi-proj: more complex annotation projection approach

Cross-Lingual Parsing

Multi-dir: transfer a parser trained on several source treebanks to the

McDonald et al. (2011)

Cross-Lingual Word Representations

Multilingual Embeddings

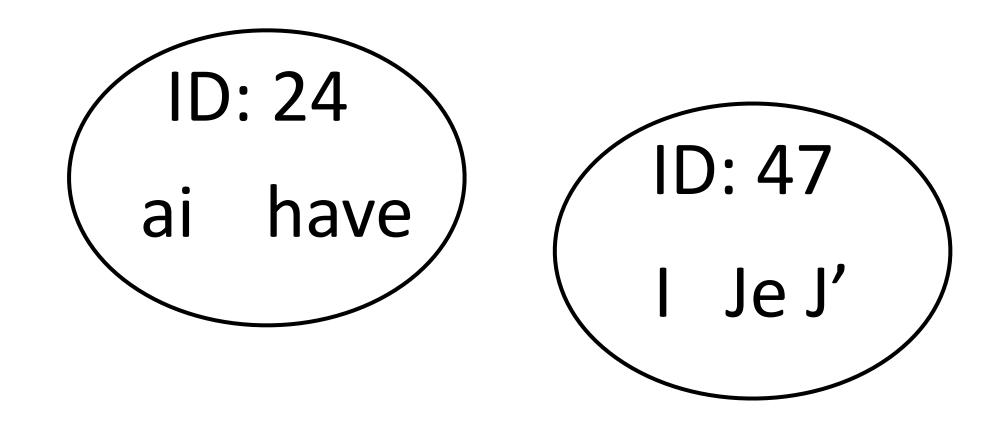

Input: corpora in many languages. Output: embeddings where similar words in different languages have similar embeddings

I have an apple 47 24 18 427

J' ai des oranges 47 24 89 1981

MultiCluster: use bilingual dictionaries to form clusters of words that are translations of one another, replace corpora with cluster IDs, train "monolingual" embeddings over all these corpora

Works okay but not all that well

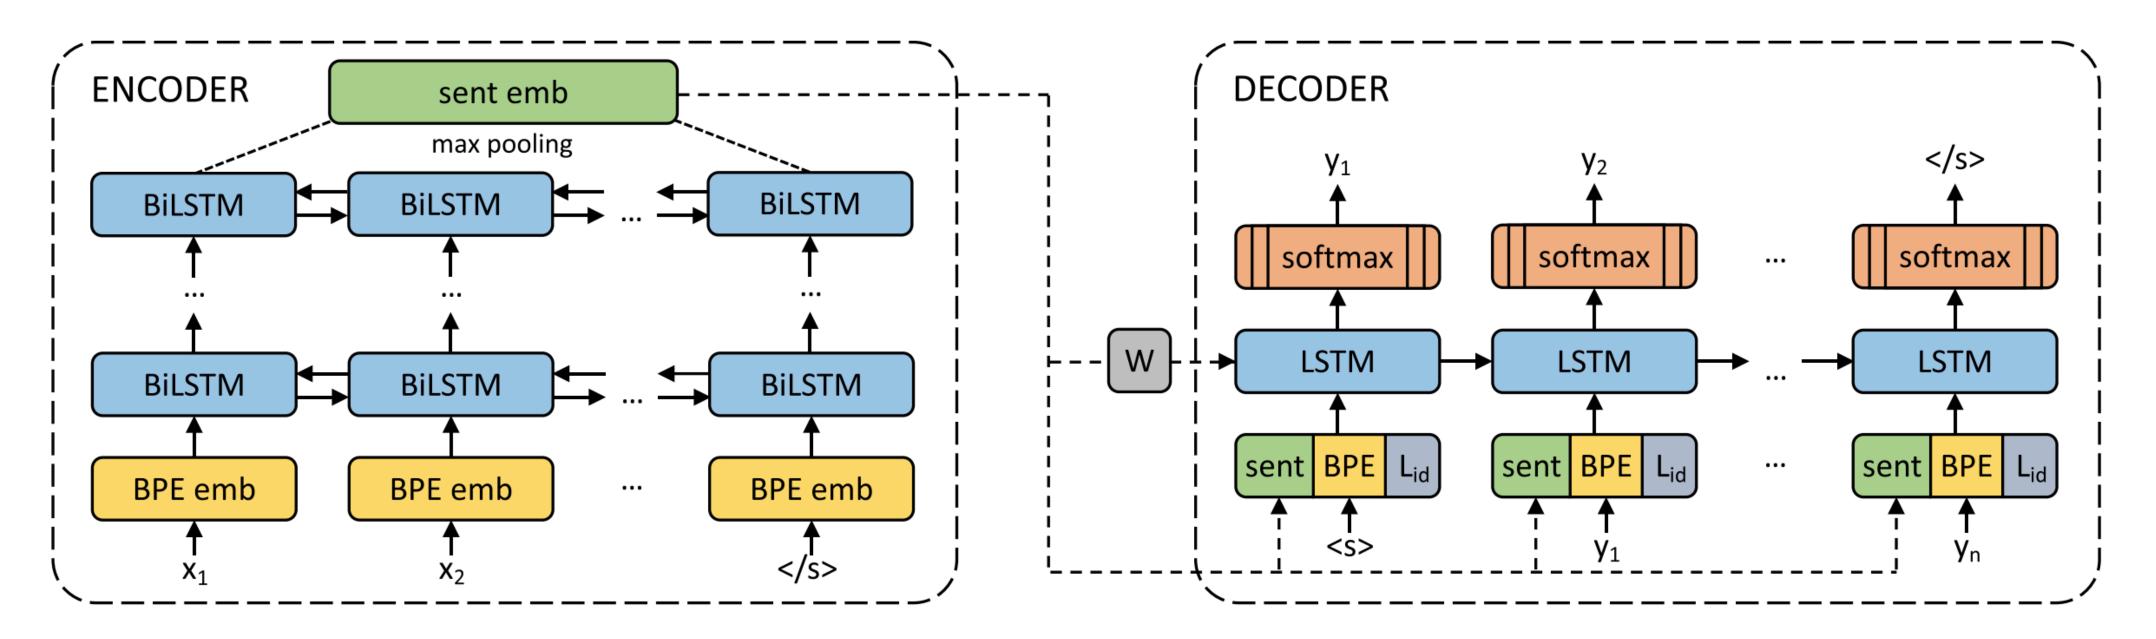

Ammar et al. (2016)

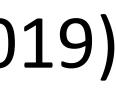

Multilingual Sentence Embeddings

- Form BPE vocabulary over all corpora (50k merges); will include characters from every script
- Take a bunch of bitexts and train an MT model between a bunch of language pairs with shared parameters, use W as sentence embeddings

Artetxe et al. (2019)

Multilingual Sentence Embeddings

		EN							EN -	$\rightarrow XX$

Table 2: POS accuracy on a subset of UD languages.

Pires et al. (2019)

	HI	UR	
HI	97.1	85.9	
UR	91.1	93.8	

Table 4: POS accuracy on the UD test set for languages with different scripts. Row=fine-tuning, column=eval.

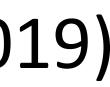

Urdu (Arabic script) => Hindi (Devanagari). Transfers well despite different alphabets!

Japanese => English: different script and very different syntax

Multilingual BERT: Results

	EN	BG	JA
EN	96.8	87.1	49.4
BG	82.2	98.9	51.6
JA	57.4	67.2	96.5

Pires et al. (2019)

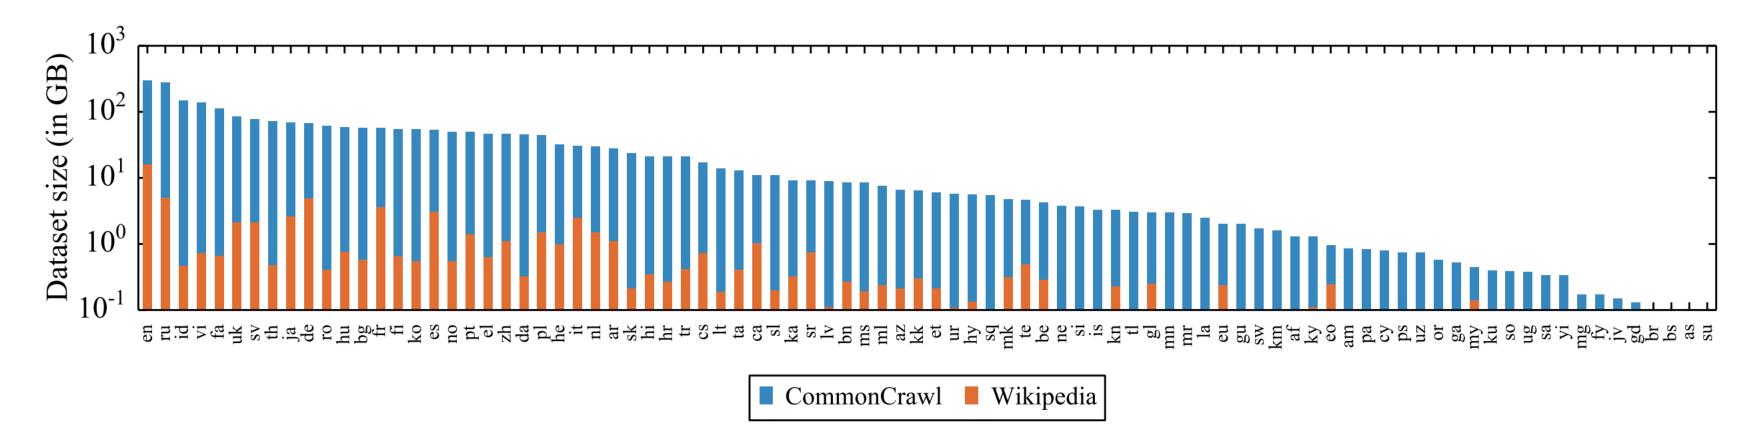

Figure 1: Amount of data in GiB (log-scale) for the 88 languages that appear in both the Wiki-100 corpus used for mBERT and XLM-100, and the CC-100 used for XLM-R. CC-100 increases the amount of data by several orders of magnitude, in particular for low-resource languages.

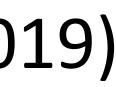

Larger "Common Crawl" dataset, better performance than mBERT

Low-resource languages benefit from training on other languages

High-resource languages see a small performance hit, but not much

Scaling Up: XLM-R

Conneau et al. (2019)

- Universal dependencies: treebanks (+ tags) for 70+ languages
- Many languages are still small, so projection techniques may still help
- More corpora in other languages, less and less reliance on structured tools like parsers, and pretraining on unlabeled data means that performance on other languages is better than ever
- Multilingual models seem to be working better and better but still many challenges for low-resource settings

- challenges
- Problems: how to analyze rich morphology, how to generate with it
- Can leverage resources for English using bitexts
- Next time: wrapup + discussion of ethics

Many languages have richer morphology than English and pose distinct
