DR SARAH ABRAHAM

AGILE OVERVIEW

TRIPLE A GAME DEVELOPMENT TIMELINES

- ▶ Notoriously difficult to predict or control
- ▶ Release dates often determined by publisher based on other game/movie releases and seasons
- ▶ Fixed timelines means pivots (however necessary) are risky and expensive
- ▶ Note: indie and mid-sized studios have different constraints, as does mobile, but similar problems arise

AGILE DEVELOPMENT

- ▶ Catch-all term for iterative software development
- ▶ Testing tightly coupled with design and execution
- ▶ Allows for a project to deviate from its original conception as new information shapes its direction
- ▶ Needs to balance long-term goals with short-term accomplishments

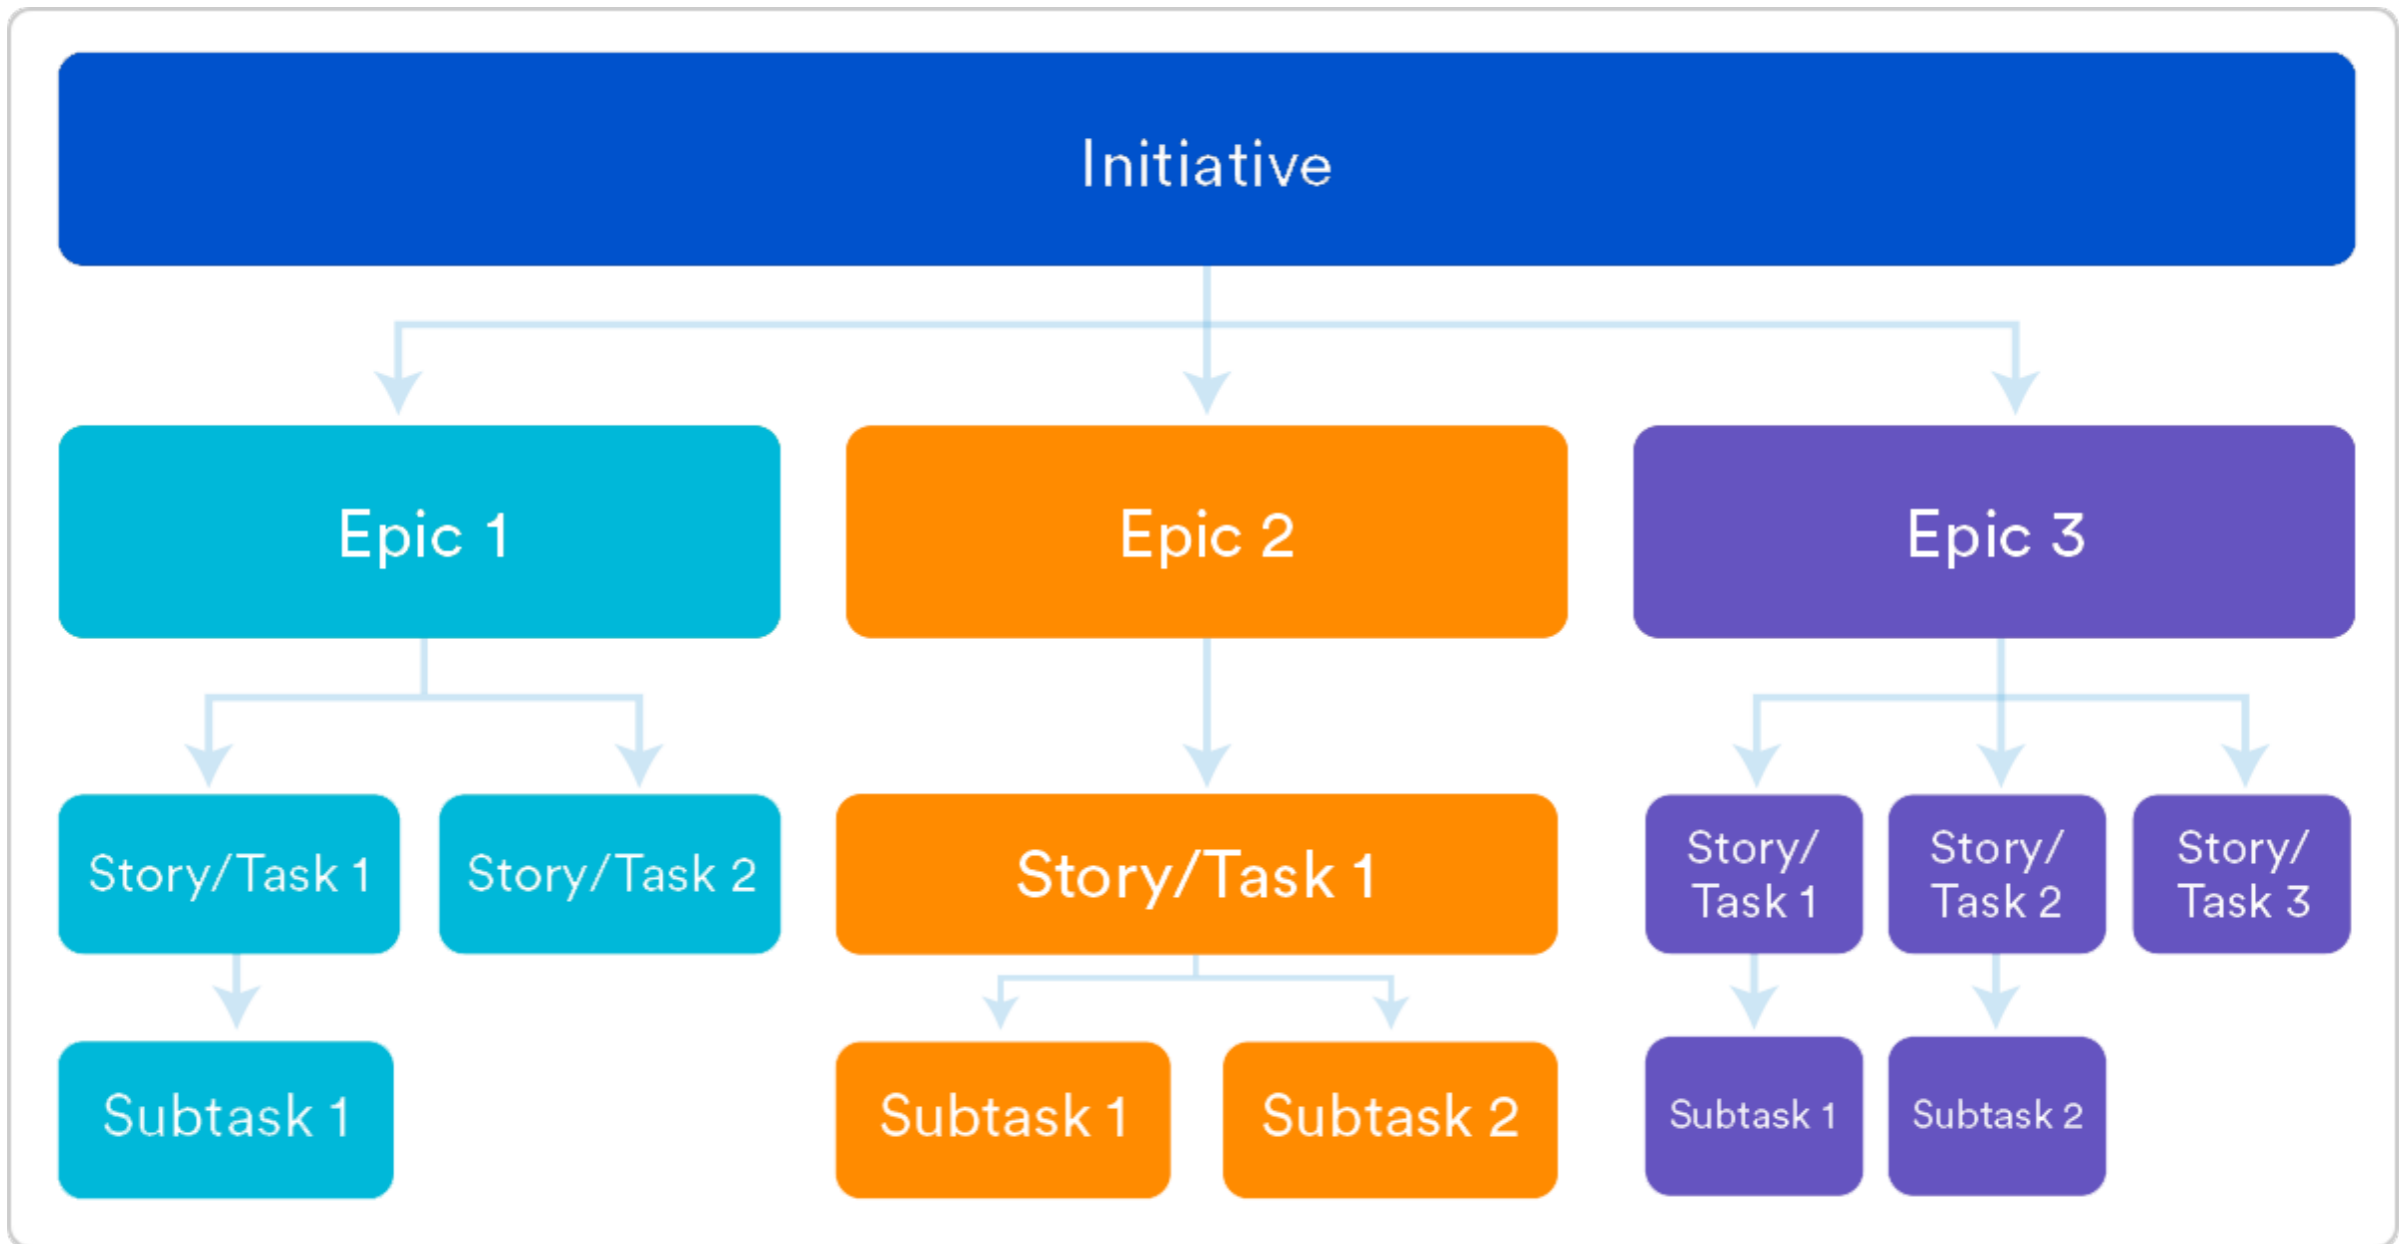

AGILE VERSUS WHAT?

- ▶ Agile as a concept mostly makes sense in the context of other methodologies such as Waterfall
- ▶ Waterfall requires planning out each stage fully before executing on it
- ▶ Works well in highly structured design cases
 - ▶ Traditional architecture
 - ▶ Hardware architecture
 - ▶ etc..

AGILE TIMEFRAMES

- ▶ Epics
 - ▶ Large body of work containing “user stories”
- ▶ Stories
 - ▶ Functionality must be accomplished to provide a user experience
- ▶ Tasks
 - ▶ Units of work that make up stories
- ▶ Sprints
 - ▶ Period of time teams have to complete tasks and stories

TIMELINE OVERVIEW

SPRINTS

- ▶ A short (usually two to four week) period of time to complete a set amount of work
- ▶ Why two to four weeks?
 - ▶ How does this affect the task size versus iterative nature of development?

SCRUM

- ▶ Popular methodology for implementing Agile principles
- ▶ Basic idea of having frequent check-ins on project's current direction and progress
 - ▶ Short daily check-ins (stand-up)
 - ▶ Check-ins at the start of a sprint (sprint planning)
 - ▶ Check-ins at the end of a sprint (sprint review)
- ▶ A number of formal "ceremonies" and roles within this methodology but not strictly necessary to accomplish its purpose

STAND-UP

- ▶ Daily check-in at the beginning of the work day
 - ▶ Ideally brief (less than 15 minutes total)
- ▶ Each team member lists accomplishments, obstacles, and progress toward the sprint deadline
 - ▶ What they did yesterday
 - ▶ What they're going to do today
 - ▶ Any known blocks
- ▶ Ensures everyone knows what the rest of the team is doing and provides clear daily objectives
- ▶ Reduces number of meetings...in a perfect world!

STAND-UP ETIQUETTE

- ▶ Try to remain standing if you don't have a condition that makes standing difficult
 - ▶ The idea is to keep it short, and standing incentivizes short meetings
- ▶ This is **not** a time for discussions or problem-solving
- ▶ Anything that needs to be discussed should happen **after** the stand-up
- ▶ Stand-up should happen within relatively small teams
 - ▶ Too large of groups take too long
 - ▶ Too large of groups means most of the information is irrelevant for the individual developers

SPRINT PLANNING AND REVIEW

- ▶ Planning meeting organizes what needs to be accomplished during a sprint
 - ▶ Prioritization of tasks
 - ▶ Estimates of work time
- ▶ Review meeting shows what has been accomplished during the sprint
 - ▶ Time for feedback and critique but not the final approval process

TASKS AND TICKETS

- ▶ Tasks usually assigned at the start of a sprint
- ▶ Tickets encapsulate the features and bugs you are expected to work on (more on this next time)
- ▶ Good time estimates on tickets is essential
 - ▶ How to know how long a feature/bug fix will take?

WORKING AS A TEAM

- ▶ Needs and desires of programmers, artists, and designers are often in direct opposition!
 - ▶ Designers want more features
 - ▶ Artists want more texture memory
 - ▶ Programmers want the game to run fast
- ▶ Compromise required
- ▶ Game Design Document (and Technical Design Document) can guide this compromise process
- ▶ Clear scoping prevents miscommunications and wasted effort

WHAT IS SCOPE?

- ▶ All-encompassing assessment of project effort
- ▶ Game features require time and money
 - ▶ Reducing time or money reduces scope of game features
 - ▶ Reducing scope of game features can reduce need for time or money

SCOPING FEATURES

- ▶ Creating new engines, tools, or features increases scope more than using existing engines, tools, or features
- ▶ Being conservative in terms of features may reduce time and effort but potentially lowers game quality
- ▶ Be deliberate when choosing where to spend effort
- ▶ Pick the right people (and the right tools) for the right job

SCOPING MONEY AND TIME

- ▶ Allowing more time for a project can reduce the needed money
 - ▶ Often how indie developers work without quitting their "day job"
- ▶ Having more money for a project can reduce the amount of time a game takes
 - ▶ Fast ramp-up time or hiring on experts can make a project go more smoothly

THE MYTHICAL MAN-MONTH

- ▶ 1975 book on software productivity by Fred Brooks
- ▶ Addresses common productivity misconception that adding more people can reduce development time
 - ▶ “The bearing of a child takes nine months, no matter how many women are assigned.”
 - ▶ Game studios often guilty of this fallacy!
 - ▶ When game falls behind schedule, large number of contractors brought on to “speed up” development
- ▶ The moral is money doesn’t inherently reduce time
 - ▶ Work smarter – not harder

OVER-SCOPING AND FEATURE CREEP

- ▶ Over-scoping is the underestimation of time and effort required for a project
 - ▶ Can be mitigated with better planning and consulting experts with direct experience in that domain
- ▶ Feature creep is changes/additions of features well into the game development cycle
 - ▶ Earlier wasted effort can slow development
 - ▶ Can be mitigated by “locking in” ideas earlier
 - ▶ Note: changing direction may not lead to a better game and locking in early may not work out either!

WHAT IS CRUNCH?

- ▶ Overtime work for an extended period
- ▶ Often unpaid if you're salaried
- ▶ Common in game development as well as other software industries

MITIGATING CRUNCH

- ▶ Crunch will probably happen at most studios but 1) it isn't an inevitability and 2) there is such a thing as reasonable crunch:
 - ▶ No more than 2-4 weeks
 - ▶ No more than 60 hours/week
 - ▶ Meets a specific goal or major deadline
 - ▶ Normal hours afterward for at least twice the duration of crunch

PRICE OF CRUNCH

- ▶ Humans unable to maintain creative work for that long!
 - ▶ Reduces cognitive function
 - ▶ Destructive toward worker's mental and physical health
- ▶ Accomplishes less per 60+ hour week than during a normal 40 hour week!
- ▶ Leads to massive company attrition
- ▶ <https://www.ign.com/articles/naughty-dog-leaders-discuss-crunch-tlou2>

CRUNCH IS NOT REQUIRED TO MAKE A GOOD GAME!

- ▶ <https://kotaku.com/the-secret-to-the-success-of-bastion-pyre-and-hades-1838082618>
- ▶ <https://screenrant.com/video-game-companies-without-crunch-time-forced-hours/>

HOW TO AVOID CRUNCH CULTURE?

- ▶ Not all game studios crunch!
 - ▶ Life at a studio varies widely based on the company's values
- ▶ Look for jobs that are known for promoting work-life balance
- ▶ Good management leads to good balance
- ▶ It's easy to know if a studio crunches because everyone knows
 - ▶ Ask at game networking events
 - ▶ Check on Glassdoor
 - ▶ Ask during the interview (if a place supports crunch they usually won't try to hide it)

WHAT DO YOU LOOK FOR IN A COMPANY?

- ▶ Something to consider whether or not you want to work in games
- ▶ Many considerations beyond salary:
 - ▶ Work-life balance
 - ▶ Job satisfaction
 - ▶ The team and the management
 - ▶ The commute time
 - ▶ And many many other things...

WORK-LIFE BALANCE

- ▶ Even if you value money or productivity more than a personal life, having a personal life is essential for your mental and physical health and creativity
- ▶ Make sure you get enough sleep, eat well, and cultivate enough time for personal hobbies and personal connections
